LAYER 1 · TOKEN RESEARCH

Avalanche AVAX

AVAX earns very little against a $4.03B valuation, staking keeps minting, and the token is down 21.5% over 30 days. Institutional mandates are real but mostly undated, so the next eight weeks favour the lower half of the volatility range.

KEY POINTS

1. **NYSE venue picks Avalanche.** An NYSE-affiliated venue selected Avalanche to supply core ledger technology for tokenised securities clearing. The role is pending regulatory approval and no launch date was given.
   avalanche.com, 9 Nov 2026
2. **Fee take is tiny.** DefiLlama shows 30-day fees of $336,030, one-year fees of $2.67M and all-time fees of $92.48M; revenue equals fees.
   DefiLlama, 11 Nov 2026
3. **Staking keeps minting AVAX.** Blockworks counted about 198M AVAX staked across 594 validators and net issuance of roughly 2.56M AVAX for Q3 2026.
   Blockworks, Q3 2026
4. **Treasury-linked sellers remain.** An SEC filing shows the Foundation sold at least $200M of AVAX to Avalanche Treasury Co., and AVAT pledged about 5.6M AVAX for a $25M loan.
   SEC filing, 2026
5. **Asset and payment use growing.** Blockworks reports real-world assets on the C-Chain at $1.22B, card spend of $10.05M, up 74%, and Pharaoh DEX volume doubling to $5.33B.
   Blockworks, Q3 2026

WHAT IT IS

Avalanche is a layer-1 blockchain. AVAX pays fees, secures the network through staking and is the unit of account across Avalanche L1s; the C-Chain runs Ethereum-compatible contracts and the P-Chain coordinates validators and custom L1s. Institutions use it for tokenised assets, settlement and payments; Schwab made AVAX available through Schwab Crypto on 9 Nov 2026.

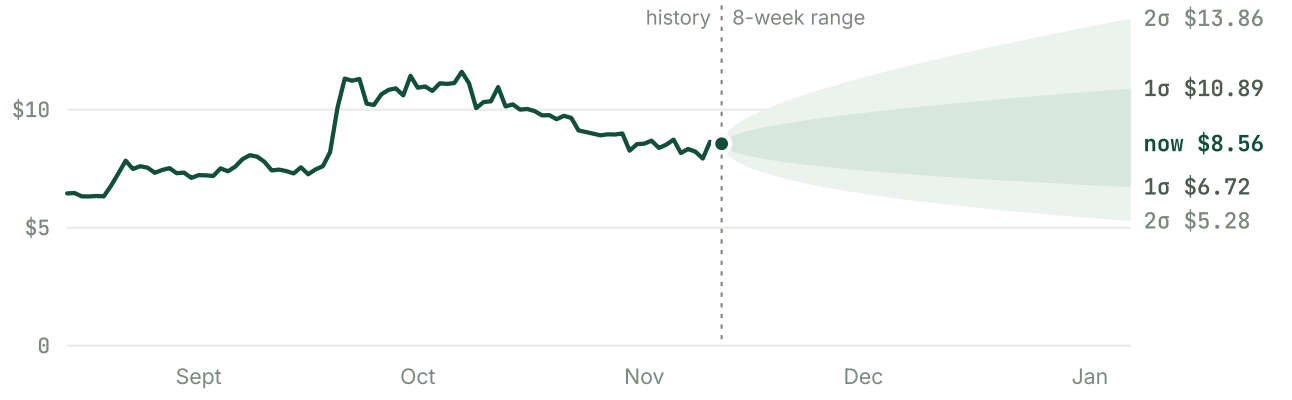

TRACK RECORD

NEAR 2 Nov	BEARISH	−15.5% in 7 days	BTC −4.5%	right
HYPE 30 Oct	NEUTRAL	−14.1% in 7 days	BTC −2.4%	held range
PEPE 30 Oct	BEARISH	−1.1% in 7 days	BTC −2.4%	right
ETH 30 Oct	BEARISH	−0.2% in 7 days	BTC −2.4%	right

Every earlier call with a 7-day score, newest first (4 so far — too few for a hit rate). Bitcoin's move over the same week is shown because a bearish call in a falling market proves little.

Price, 90 days, and the 8-week range

CoinGecko daily closes · shaded: 1σ and 2σ if 30-day volatility holds

Supply: Unlock-light window, staking mints

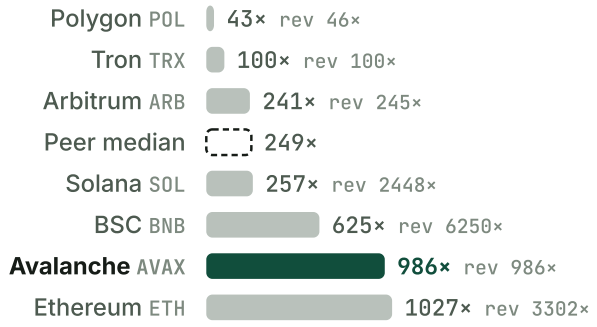

Supply grows only slightly over the next 90 days: 1.7M AVAX, 0.4% of circulating supply, goes to the Foundation at the 24 January 2027 cliff, and the documented schedule shows nothing further. Staking rewards mint continuously and sit outside that schedule.

Valuation: 986x fees against 249x peers

Fees are the right lens for a Layer 1, and AVAX trades at 986.2x FDV to annualised fees against a peer median of 249.0x. That median hides a wide spread: Ethereum is at 1026.8x and BSC at 625.0x, while Tron is at 99.8x and Polygon at 42.6x. The 7-day pace, $4.89M annualised, runs ahead of the 30-day $4.09M.

FDV ÷ annualised fees (revenue beside)

DefiLlama 30d × 365/30 · CoinGecko FDV · dashed: peer median

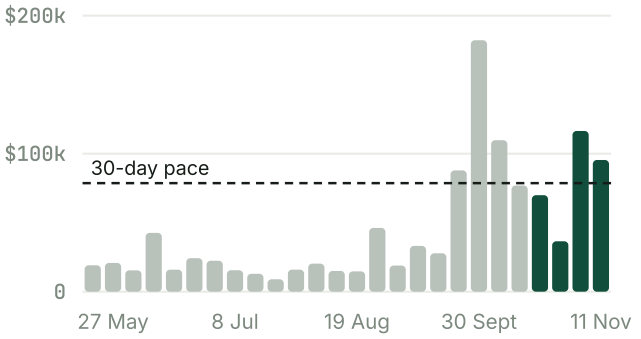

Usage: Small fees, improving use

Fees are small but improving: Blockworks counts Q3 2026 network fees of 61,583 AVAX, up 44% after the 22 September Helicon upgrade, with app-level fees up 14%. Usage skews to tokenised assets, settlement and payments, so flow is institutional rather than retail.

Fees per week, 26 weeks

DefiLlama · last 4 weeks highlighted · dashed: 30-day pace

What would make this wrong

Platform approval arrives.
A regulatory approval and a firm launch date for the NYSE-affiliated clearing role would lift the fee outlook well above today's run rate.

Fee pace accelerates.
If 7-day annualised fees stay above the 30-day pace, the network's cash-flow case improves faster than expected.

Short squeeze risk.
Seven-day funding sits below AVAX's usual range, and that reads as crowded shorts; an unwind could lift price quickly.

Inflation runs lower.
Helicon's lower minimum staking consumption rate is expected to trim annual inflation by 0.5 to 1 percentage point, easing supply pressure.

Positioning

FUNDING, 7-DAY AVG
-0.0020%
per 8h · its usual range -0.0010% to +0.0094% — shorts crowded

OPEN INTEREST
$76.58M
+9.7% over 7 days · Coinalyze

LONG/SHORT ACCOUNTS
2.25
69% long · Coinalyze

Hyperliquid funding is -0.0109%/8h now and averages -0.0020%/8h over seven days. Open interest across exchanges is $77M, up 9.7% in a week, and the long/short account ratio is 2.25, so 69% of accounts are long (Coinalyze). **Decision: WAIT** — price is in the zone, but 7-day funding is at its own low extreme — crowded.

Conclusion

The institutional pipeline is stronger than the economics. The NYSE-affiliated clearing role and Schwab access are real, but neither is dated or priced, and the token's fee take stays tiny. Staking issuance continues and four-week momentum is negative, so the evidence sits on the lower half of the volatility range.

WAIT · SHORT

The view is bearish and price is in the zone, but the short side is crowded (7-day funding at its own low extreme): wait for funding to come back inside its range

ZONE TO WATCH
$8.37–8.73
the top of the 7-day range

ALERT AT
in the zone
and funding back inside its range

FILL BY
18 Nov
else scored "not filled"

No chasing: the bot's rules enter at the edge of a recent range (the 30-day range, or the 7-day one when the 30-day edge is out of reach this week), never in the middle or on a break. Stop and targets follow fixed rules and print when price reaches the zone (a re-issue of this note).

What changes the view: Two straight weeks of 7-day annualised fees above the 30-day pace.

Range: 8-week 1σ $6.72–$10.89 at 3.2% a day.

Alerts to set

$8.37	price reaches the top of the 7-day range — the zone (re-issue with levels)
18 Nov	fill deadline — no fill by then scores "not filled"
$10.23	the 30-day high — a close beyond it is a break, not a fade: the view is re-assessed

Liquidity

24h spot volume $300.94M (CoinGecko) · Hyperliquid perp, max 10×; order book within ±1%: $1.64M bids / $1.26M asks · Lighter perp listed.

Risk class: SPECULATIVE

Fees under $10M a year. A label for how established the asset is, not a position size: size any trade from your own risk budget (account × risk % ÷ stop distance).

DATA GAPS

No primary source separates incentives, emissions or points farming from organic activity; the NYSE platform launch date and AVAX One's Q3 earnings date are unpublished; Foundation, team and investor sales beyond one SEC filing are unknown.

METHOD

Every number is read by the bot from the named source at the time shown; the AI (deepseek/deepseek-v4.1-flash, deep dive, 25 web results, plus a search on the bot's news leads) writes the words and may only use those numbers — a gate checks every figure in the text before publication. The range is the coin's 30-day realised volatility projected 8 weeks. Trade levels follow fixed rules: the entry zone sits at the edge of the 30-day range — or the 7-day range when the 30-day edge is more than two weekly moves away — (no chasing), the stop one weekly 1σ beyond it, targets at 2R and the next band edge; TRADE NOW only when price is in the zone, otherwise WAIT. The idea is scored publicly 7 and 30 calendar days after publication; a WAIT that never reaches its zone is scored "not filled".
