LAYER 1 · TOKEN RESEARCH

NEAR Protocol NEAR

NEAR trades at 75.5x annualised fees and 220.1x annualised revenue against a 25.5x peer median. Own-chain activity is collapsing, the buyback offsets about a tenth of issuance, and positioning is still long. The Intents business is real but richly priced.

PRICE	FULLY DILUTED VALUE	FDV ÷ ANNUAL FEES	NEW SUPPLY, 90D (DOCUMENTED)
$4.27	$5.60B	76×	none due
−12% 30d	mcap $5.60B	÷ revenue 220× ($26.75M/yr)	schedule fully unlocked · issuance not counted

KEY POINTS

1. **Fees and revenue are accelerating.** Thirty-day fees annualise at $74.18M against $54.24M for the trailing year; revenue annualises at $26.75M against $9.51M. Revenue is what the protocol keeps.
   DefiLlama fees, 2 Nov 2026
2. **The chain is not the product.** Intents grossed $50.0M in fees in the year to September 2026 versus $1.27M on NEAR's own chain, on $4.8B of September volume.
   tradingstrategies.work, 2 Oct 2026
3. **Own-chain activity is shrinking fast.** Over the 30 days to 30 September 2026, own-chain transactions fell to 0.80M a day from 4.68M in 2025, active accounts fell 79% and new accounts 95%.
   tradingstrategies.work, 2 Oct 2026
4. **Valuation sits far above the peer.** FDV divided by annualised fees is 75.5x and by annualised revenue 220.1x, against 25.5x for deBridge and a 25.5x peer median.
   DefiLlama and CoinGecko, 2 Nov 2026
5. **Revenue is inflecting and capture rising.** Lifetime Intents fee capture is about 16.4% and 28.4% over the trailing 30 days, with $30.42B settled in the year to September 2026.
   Nansen, 6 and 20 Oct 2026

WHAT IT IS

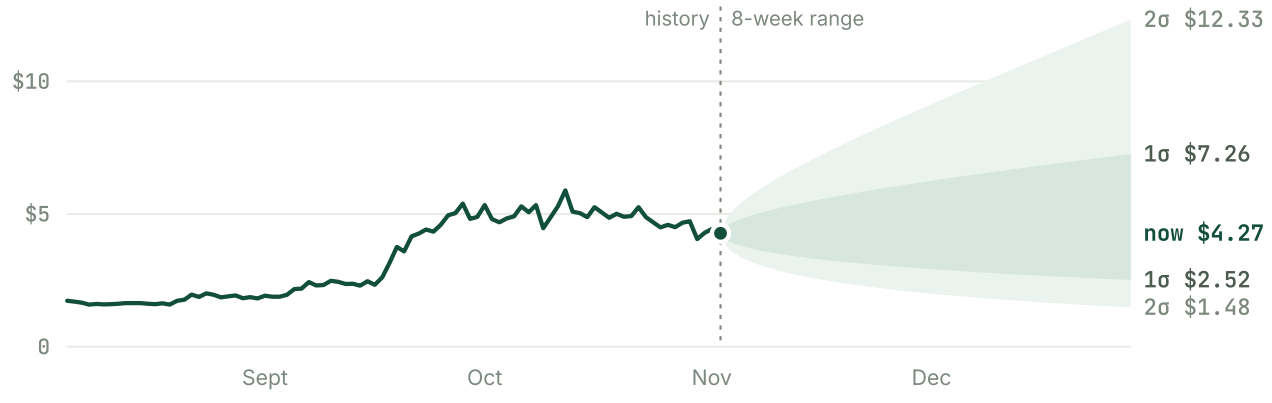

NEAR is a layer-1 blockchain whose main product is NEAR Intents, a solver-based cross-chain swap service that settles on NEAR: a user states a goal, professional solvers bid within about a second, and settlement happens on NEAR. Chain Signatures let a NEAR account sign on Bitcoin, Ethereum or Solana without a bridge.

THE BOT'S RANGE

At NEAR's 30-day volatility (7.1% a day), the volatility-derived 8-week range is $2.52–$7.26 (1σ) and $1.48–$12.33 (2σ) — if recent volatility holds. It is a scenario frame, not a forecast or a calibrated probability; the verdict says which end the evidence favours.

Price, 90 days, and the 8-week range

CoinGecko daily closes · shaded: 1σ and 2σ if 30-day volatility holds

Supply: No unlocks due, but 2.5% inflation runs

DefiLlama shows 1.305B of 1.305B tokens unlocked, no cliffs and no new tokens in the next 90 days, with circulating supply of 1.311B. Issuance is 2.5% a year, about 32M NEAR. A buyback of 1.85M NEAR offsets roughly 10% of the 19.2M issued since 23 Feb 2026. Staked supply is 592.01M, or 45.17%.

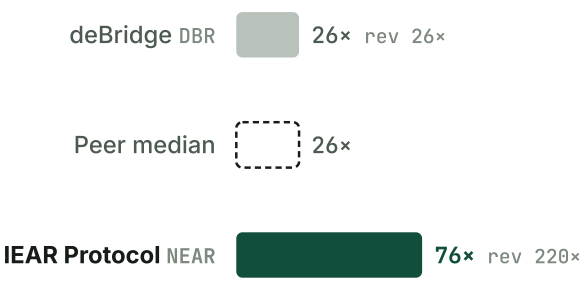

⚠ NEAR's documented release schedule is fully unlocked — nothing more is scheduled. Ongoing issuance (staking or validator rewards, emissions) and any burn are outside it; the supply text above is the read on them.

Valuation: 220x revenue versus a 25.5x peer median

For NEAR, revenue matters most: Intents generates the volume and NEAR keeps only part of the fees, about 28.4% over the trailing 30 days. FDV divided by annualised revenue is 220.1x; by annualised fees, 75.5x. The peer median is 25.5x.

FDV ÷ annualised fees (revenue beside)

DefiLlama 30d × 365/30 · CoinGecko FDV · dashed: peer median

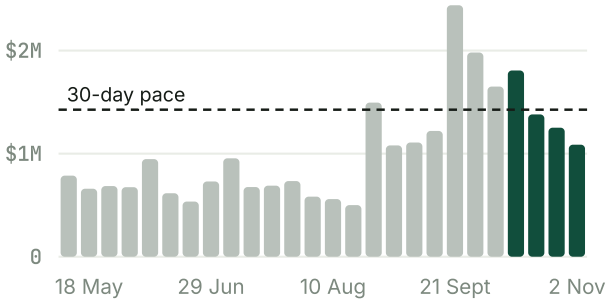

Usage: Intents carries the usage

In the year to September 2026 Intents grossed $50.0M in fees against $1.27M on NEAR's own chain, with $4.8B of volume in September alone. Own-chain transactions fell to 0.80M a day from 4.68M.

Fees per week, 26 weeks

DefiLlama · last 4 weeks highlighted · dashed: 30-day pace

What would make this wrong

Issuance cut passes.
Governance approving a cut from 2.5% to 1.6% would remove a central part of the bear argument.

Intents volume holds.
Sustained Intents volume near $177M a day would support the current revenue multiple.

Buyback scales up.
If the buyback offsets materially more than a tenth of new issuance, supply pressure eases.

Own-chain usage stabilises.
A turn in transactions and active accounts would undercut the collapse argument.

Catalysts

Nov 2026 - Jan 2027	No new tokens unlock; no cliffs in the window.	DefiLlama emissions schedule, 2 Nov 2026

WATCHLIST — NOT CATALYSTS UNTIL CONFIRMED

UNDATED	Governance proposal to cut issuance to 1.6%	Nansen, 20 Oct 2026
UNDATED	HSP-027 removal of the 30% developer gas rebate reaching mainnet	Coinbureau, 2026
CONFLICTING	DefiLlama unlocks page shows 95,829 NEAR/day core-team unlocks	DefiLlama unlocks
CONFLICTING	CoinGecko 24h fees of $60,115 versus DefiLlama 30d annualised	CoinGecko, 2 Nov 2026

Positioning

FUNDING, 7-DAY AVG	OPEN INTEREST	LONG/SHORT ACCOUNTS
+0.0088%	$181.23M	1.25
per 8h · Hyperliquid	−23.9% over 7 days · Coinalyze	55% long · Coinalyze

Funding is positive at +0.0100%/8h now and +0.0088%/8h on a 7-day average, so longs pay shorts. Open interest fell 23.9% in seven days to $181M across exchanges, and the long/short account ratio is 1.25, with 55% of accounts long. **Decision: WAIT** — price is below the zone (wait for a bounce into it).

Conclusion

NEAR's Intents business is real and fees are accelerating, but the token prices that at 220.1x annualised revenue against a 25.5x peer median. Own-chain usage is collapsing, the buyback offsets about a tenth of issuance, and funding and the long/short ratio show the crowd is still long. The evidence points down inside the eight-week range.

WAIT · SHORT **The view is bearish, the entry is not here yet: price is below the zone (wait for a bounce into it)**

ZONE TO WATCH	ALERT AT	FILL BY
$5.36–5.89	$5.36	9 Nov
the top of the 30-day range	price reaching the zone	else scored "not filled"

No chasing: the bot's rules enter at the edge of a recent range (the 30-day range, or the 7-day one when the 30-day edge is out of reach this week), never in the middle or on a break. Stop and targets follow fixed rules and print when price reaches the zone (a re-issue of this note).

What changes the view: 7-day annualised fees fall below the 30-day pace for two consecutive weeks

Range: 8-week 1σ $2.52–$7.26 at 7.1% a day.

Alerts to set

$5.36	price reaches the top of the 30-day range — the zone (re-issue with levels)
9 Nov	fill deadline — no fill by then scores "not filled"
$5.89	the 30-day high — a close beyond it is a break, not a fade: the view is re-assessed
Nov 2026 - Jan 2027	No new tokens unlock; no cliffs in the window.

Liquidity

24h spot volume $370.19M (CoinGecko) · Hyperliquid perp, max 10×; order book within ±1%: $3.25M bids / $3.35M asks · Lighter perp listed.

Risk class: GROWTH

Between the CORE and SPECULATIVE tests (FDV < $20B, fees < $100M a year, volume < $500M). A label for how established the asset is, not a position size: size any trade from your own risk budget (account × risk % ÷ stop distance).

DATA GAPS

No primary source on team, foundation or investor sales. No dated vote on the 1.6% issuance cut. DefiLlama's unlocks page conflicts with the bot read, and CoinGecko's 24h fees conflict with DefiLlama's 30-day annualised figure. No points-programme data found.

METHOD

Every number is read by the bot from the named source at the time shown; the AI (deepseek/deepseek-v4.1-flash, deep dive, 25 web results, plus a search on the bot's news leads) writes the words and may only use those numbers — a gate checks every figure in the text before publication. The range is the coin's 30-day realised volatility projected 8 weeks. Trade levels follow fixed rules: the entry zone sits at the edge of the 30-day range — or the 7-day range when the 30-day edge is more than two weekly moves away — (no chasing), the stop one weekly 1σ beyond it, targets at 2R and the next band edge; TRADE NOW only when price is in the zone, otherwise WAIT. The idea is scored publicly 7 and 30 calendar days after publication; a WAIT that never reaches its zone is scored "not filled".

LIMITATIONS

- no "Leads: N of M confirmed." line from the dossier
