PRIVACY LAYER 1 · TOKEN RESEARCH

Monero XMR

Monero is private cash; supply is set by mining and nothing unlocks. Fee activity runs modestly above its year-long pace, and the coin is the cheapest proof-of-work peer per dollar of fees. Positioning and the wider market argue the other way; neither wins over eight weeks.

Previous call: NEUTRAL on 12 Nov 2026 at $557.38 (−0.9% since) — unchanged.

NEUTRAL
over the next 8 weeks
the research leaned lower; the independent reads do not back it: usage points higher; supply is unclear; valuation points neither way — no call

WHAT IT IS

Monero is digital cash, private by default: each input is signed in a ring of 16, with stealth addresses and RingCT since January 2017. It runs on RandomX proof of work with two-minute blocks, no premine, presale or ICO; coins are mined, held in self-custody wallets and fees go to miners.

TRACK RECORD

ETHFI 5 Nov	BEARISH	+2.6% in 7 days BTC −8.0%	wrong
NEAR 2 Nov	BEARISH	−15.5% in 7 days BTC −4.5%	right
HYPE 30 Oct	NEUTRAL	−14.1% in 7 days BTC −2.4%	held range
PEPE 30 Oct	BEARISH	−1.1% in 7 days BTC −2.4%	right

The four most recent of 5 earlier calls with a 7-day score (5 so far — too few for a hit rate). Bitcoin's move over the same week is shown because a bearish call in a falling market proves little.

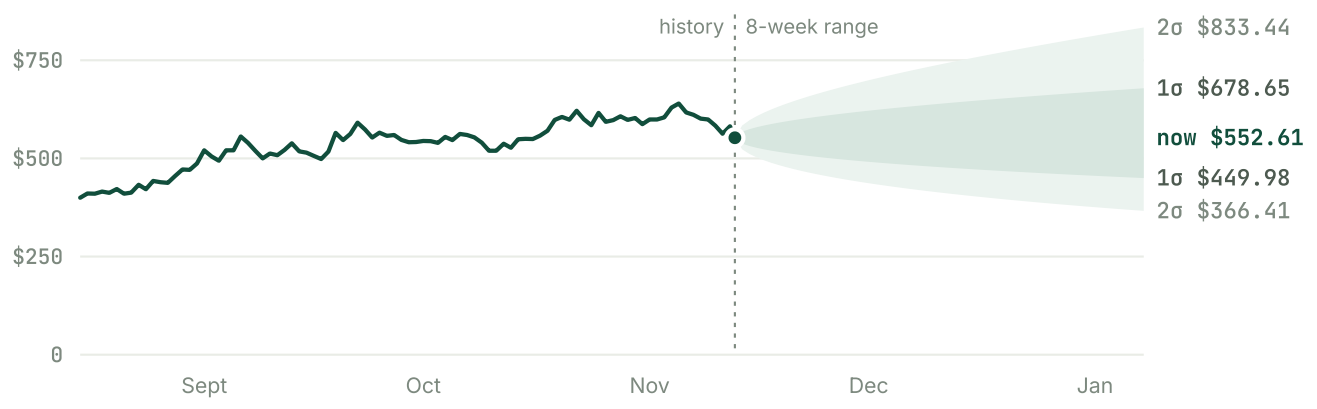

PRICE	FULLY DILUTED VALUE	FDV ÷ ANNUAL FEES	NEW SUPPLY, 89D (MEASURED)
$552.61	$10.40B	6768×	+0.20%
+5% 30d · Bitcoin −14%	mcap $10.40B	fees $1.54M a year, 30-day pace	no release schedule · +0.8% a year

KEY POINTS

1. **Fee activity above its 12-month pace.** DefiLlama shows 30-day fees at an annualised $1.54M against $1.39M over the past twelve months; revenue is $0 because all fees go to miners.
   DefiLlama fees
2. **New coins go only to miners.** Monero has no premine and no unlock table; measured after the fact, circulating supply grew 0.20% over 89 days, 38,441 XMR or about $21.24M at today's price.
   CoinGecko, market cap ÷ price
3. **Cheapest of peers per dollar of fees.** At 6767.6× FDV to annualised fees it is the cheapest of the group; the peer median is 22,266.2× and the range runs 18,986.2× (Bitcoin) to 84,388.4× (Dash).
   CoinGecko / DefiLlama
4. **Its own move over 30 and 90 days.** Measured against Bitcoin, Monero is 2.7 points behind over 7 days but 19.4 ahead over 30 days and 23.8 ahead over 90 — its own move in the longer windows.
   CoinGecko
5. **Crowded longs into a falling market.** Seven-day funding of +0.0960%/8h is above Monero's usual range, so longs are crowded, while price sits just above the 30-day low and Bitcoin is down 14.2% over 30 days.
   Coinalyze; CoinGecko

Price, 90 days, and the 8-week range

CoinGecko daily closes · shaded: 1σ and 2σ if 30-day volatility holds

Supply: No unlock schedule; miners take new coins

Nothing is scheduled to unlock over the next 90 days: no vesting, burn or buyback, and every new coin reaches miners as a block reward. A separate estimate puts the next 90 days at +0.21% on the same basis, and inflation is 0.838%.

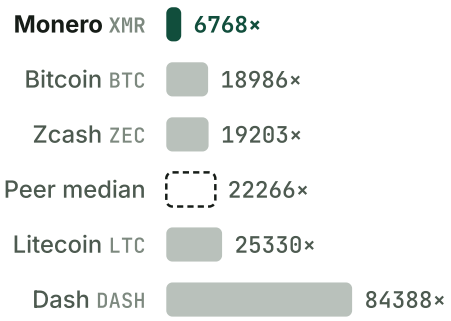

⚠ DefiLlama has no documented release schedule for XMR. The supply figure shown is measured instead: CoinGecko's circulating supply grew 0.20% over the last 89 days (issuance less any burn). It looks back, not forward.

Valuation: Cheapest per dollar of fees in the set

For coins held and used as money the fee multiple is a ranking, not a valuation: all four peers report $0 protocol revenue because fees go to miners. The peer median also rests on very thin fee bases at Litecoin and Dash, where a few thousand dollars of fees moves the multiple a long way.

FDV ÷ annualised fees (revenue beside)

DefiLlama 30d × 365/30 · CoinGecko FDV · dashed: peer median

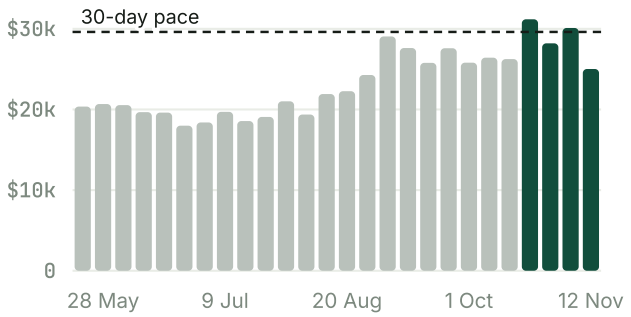

Usage: Fees tiny per transaction

The fee per transaction is tiny — the base estimate is 0.00002 XMR per kB — so activity registers in transaction counts rather than value paid. Demand leans on privacy: TRM Labs found 48% of darknet markets launched in 2025 accepted only Monero, a fact that cuts both ways.

Fees per week, 26 weeks

DefiLlama · last 4 weeks highlighted · dashed: 30-day pace

What would make this wrong

Break below $549.
A close under the 30-day low would open the lower half of the eight-week range and make a flat view hard to hold.

Early exchange delistings.
EU rules bar banks and exchanges from privacy coins from 2027; an earlier delisting would thin liquidity further.

Funding spike holds.
The current 1.2554%/8h rate costs longs 3.77% a day; if it persists, a long unwind could move price sharply.

Bitcoin's fall continues.
Monero moved with Bitcoin over seven days; another leg down in the larger market would carry it along.

Catalysts

Market

Bitcoin −8.4% 7d · −14.2% 30d · +14.4% 90d — a falling market. **XMR against Bitcoin**, measured the same way: −2.7 pts 7d · +19.4 pts 30d · +23.8 pts 90d. With the market over 7d; its own move over 30d, 90d (a gap within ±5 points counts as with the market).

Positioning

FUNDING, 7-DAY AVG
+0.0960%
per 8h · its usual range +0.0043% to +0.0619% — longs crowded

OPEN INTEREST, HYPERLIQUID
$138.69M
Binance perp $53.71M beside it (not summed), −10.2% over 7 days

LONG/SHORT ACCOUNTS
1.04
51% long · Coinalyze

Funding on Hyperliquid is +1.2554%/8h against a seven-day average of +0.0960%/8h; held for a day the current rate costs longs about 3.77%. Open interest is $139M there and $54M on Binance perpetuals, which fell 10.2% over seven days; the long/short account ratio is 1.04. **Decision: NO TRADE** — the evidence does not favour either end of the range.

Conclusion

Fees and the fee multiple are the strongest evidence for value; funding, the price's position near its 30-day low and Bitcoin's 30-day fall are the strongest against. Supply cannot be the swing factor, since it is fixed by mining and nothing is scheduled. Eight weeks is not long enough to call a direction with confidence.

NO TRADE **The evidence does not favour either end of the range**

RE-ASSESS ON A DAILY CLOSE ABOVE
$640.02
the 30-day high

RE-ASSESS ON A DAILY CLOSE BELOW
$548.85
the 30-day low

Not entry triggers: a close beyond either level re-opens the view; it is not a signal to trade the break.

What changes the view: Seven-day annualised fees fall below the twelve-month run-rate for two straight weeks.

Range: 8-week 1σ $449.98–$678.65 at 2.7% a day.

Alerts to set

$640.02	a daily close above the 30-day high — re-assess, not an entry
$548.85	a daily close below the 30-day low — re-assess, not an entry

Liquidity

24h spot volume $150.19M (CoinGecko) · Hyperliquid perp, max 5×; order book within ±1%: $383k bids / $249k asks — there, a market buy above about $249k or a market sell above about $383k moves the price more than 1% · Lighter perp listed.

Risk class: SPECULATIVE

Fees under $10M a year. A label for how established the asset is, not a position size: size any trade from your own risk budget (account × risk % ÷ stop distance).

DATA GAPS

No dated FCMP++ mainnet schedule; no primary source for the Qubic mining episode beyond an arXiv preprint; no current exchange-listing count from primary notices. Whether fees above the year-long pace are trend or noise is unresolved.

METHOD

Every number is read by the bot from the named source at the time shown; the AI (deepseek/deepseek-v4.1-flash, deep dive, 25 web results, plus a search on the bot's news leads) writes the words and may only use those numbers — a gate checks every figure in the text before publication. The verdict starts from the research's stated lean. 9 independent reads of the same research then answer, item by item, whether valuation, usage and supply each make a lower or a higher price more likely eight weeks out; the price trend is asked too but is not counted. The direction is kept only when at least two of those three items support it — 7 of the 9 reads agreeing on each — and none points the other way; a dated event that could go against it lowers that by one step. Anything else is published as NEUTRAL, with the tilt and the count stated. The range is the coin's 30-day realised volatility projected 8 weeks. Trade levels follow fixed rules: the entry zone sits at the edge of the 30-day range — or the 7-day range when the 30-day edge is more than two weekly moves away — (no chasing), the stop one weekly 1σ beyond it, targets at 2R and the next band edge; TRADE NOW only when price is in the zone, otherwise WAIT. The idea is scored publicly 7 and 30 calendar days after publication; a WAIT that never reaches its zone is scored "not filled".

LIMITATIONS

- DefiLlama has no documented release schedule for XMR
