SOLANA LAUNCHPAD · TOKEN RESEARCH

Pump.fun PUMP

Insider unlocks add 4.5% of circulating PUMP over 90 days, the 7-day fee run-rate has slipped below the 30-day, and price sits near its 30-day low. The balance of evidence tilts lower, but not strongly enough for a directional view.

NEUTRAL
over the next 8 weeks, into the 11 Dec cliff
the research tilts lower, at low conviction

Scored publicly
18 Nov · 11 Dec

PRICE	FULLY DILUTED VALUE	FDV ÷ ANNUAL REVENUE	NEW SUPPLY, 90D (DOCUMENTED)
$0.003641	$3.00B	4.9×	+4.5%
−27% 30d	mcap $1.67B	$607.88M a year · ÷ fees 1.8×	20.63B of 458.47B float

KEY POINTS

1. **Fee run-rate slips below the 30-day.** 30-day fees annualise $1.68B against $1.23B over the trailing year, but the last 7 days annualise $1.27B, so the run-rate has slipped.
   DefiLlama fees
2. **Insider-only release adds 4.5% of float.** DefiLlama's schedule has 20.625B PUMP unlocking over 90 days from 12 Nov — Team 12.500B and Existing Investors 8.125B — with 6.875B cliffs on 11 Dec and 11 Jan.
   DefiLlama unlocks
3. **Burn is the only token sink.** The project says half of platform revenue buys PUMP on the open market and burns it; 176.38B PUMP burned and $505.07M deployed to date.
   pump.fun token page
4. **Price sits near its 30-day low.** CoinGecko closes show $0.00364, against a 30-day high of $0.00513 on 22 Oct and a low of $0.00350 on 11 Nov, on 30-day realised volatility of 5.6% a day.
   CoinGecko
5. **Burns keep meeting the unlock.** Daily burns near $0.5M continue and price sits in the lower-middle of its 1σ band, so the bear case is drift rather than a break.
   pump.fun token page / CoinGecko

WHAT IT IS

Pump.fun is a Solana launchpad. Anyone can mint a memecoin for free; it trades on a bonding curve until the curve fills, then liquidity moves to the PumpSwap AMM. Creators and short-horizon traders pay trading fees. PUMP is not needed to use the product and gives no claim on revenue; the project says half of platform revenue buys and burns it.

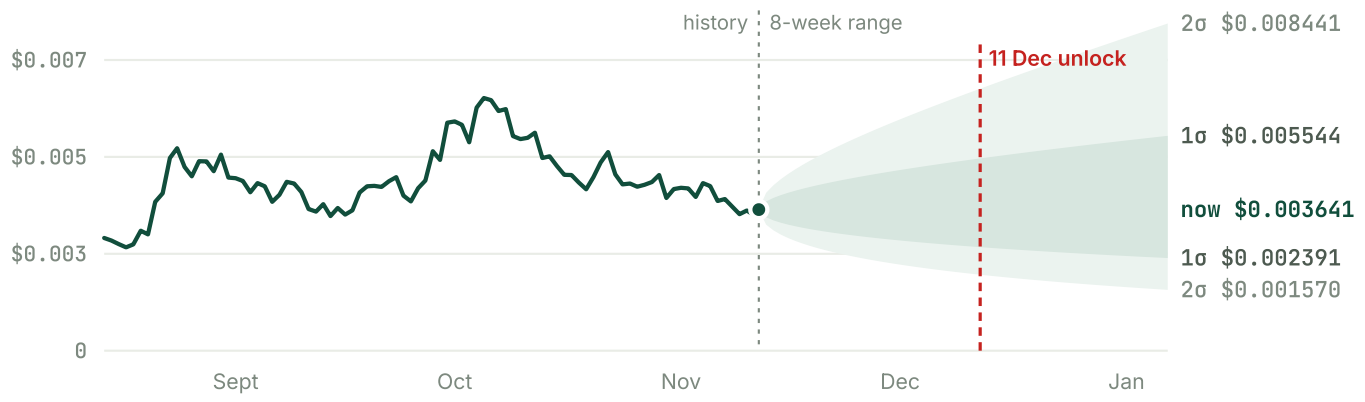

TRACK RECORD

NEAR 2 Nov	BEARISH	−15.5% in 7 days	BTC −4.5%	right
HYPE 30 Oct	NEUTRAL	−14.1% in 7 days	BTC −2.4%	held range
PEPE 30 Oct	BEARISH	−1.1% in 7 days	BTC −2.4%	right
ETH 30 Oct	BEARISH	−0.2% in 7 days	BTC −2.4%	right

Every earlier call with a 7-day score, newest first (4 so far — too few for a hit rate). Bitcoin's move over the same week is shown because a bearish call in a falling market proves little.

Price, 90 days, and the 8-week range

CoinGecko daily closes · shaded: 1σ and 2σ if 30-day volatility holds

Supply: Insider-only release adds 4.5% of float

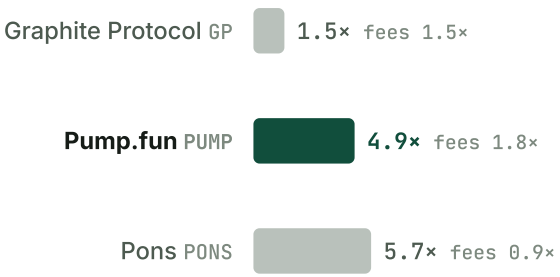

Supply grows over the next 90 days and the recipients are insiders only; the documented path may understate what arrives. DefiLlama marks the 24% Community and Ecosystem allocation as not followed and TBD, while max supply is 1.000T against 823.354B minted.

Valuation: Revenue, not fees, funds the burn

PUMP's only cash-flow link is the buyback, which the project funds from revenue, not gross fees, so revenue is the multiple that matters. The coin trades at 4.9x FDV/annualised revenue against Pons at 5.7x and Graphite Protocol at 1.5x; there are too few traded peers for a median.

FDV ÷ annualised revenue (fees beside)

DefiLlama 30d × 365/30 · CoinGecko FDV · dashed: peer median

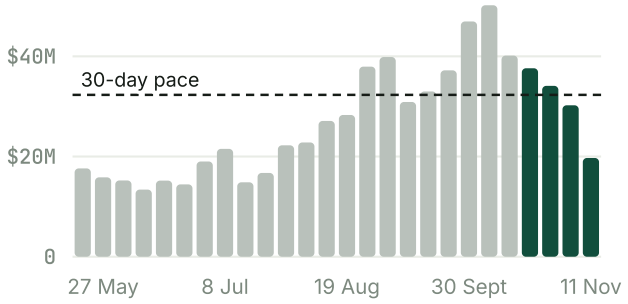

Usage: Large fees, thinning pace

Fees come from memecoin trading on the bonding curve and on PumpSwap; the project keeps $607.88M of that annualised 30-day activity as revenue. No cause has been identified for the recent slowdown. Tokenless competitors still earn: Flap sh at $4.69M of 30-day revenue, StonkFun at $2.99M and BONK.fun Launchpad at $1.61M.

Fees per week, 26 weeks

DefiLlama · last 4 weeks highlighted · dashed: 30-day pace

What would make this wrong

Buyback could slow.
The burn is discretionary and funded by trading revenue; a further drop in volume would remove the offset to insider supply.

Unlock passes absorbed.
The 4.5% insider release landing without price damage, with the coin holding above the $0.00350 30-day low, would undercut the lower half.

Fee run-rate recovers.
If the 7-day pace climbs back above the 30-day, the deceleration behind the lower tilt disappears.

Community schedule resumes.
DefiLlama marks the 24% Community and Ecosystem allocation as not followed and TBD; resumed releases would add supply beyond the documented path.

Catalysts

12 Nov 2026	First new insider unlock tokens on the documented schedule	DefiLlama unlocks
11 Dec 2026	6.875B cliff, 1.5% of float, split Team and Existing Investors	DefiLlama unlocks
11 Jan 2027	Second 6.875B cliff, 1.5% of float	DefiLlama unlocks

WATCHLIST — NOT CATALYSTS UNTIL CONFIRMED

UNVERIFIED	Pump.fun deposits to Kraken: 76,111 SOL (~$6.85M), cumulative 5,553,833 SOL reported	crypto.news citing Lookonchain, 6 Nov 2026

Positioning

FUNDING, 7-DAY AVG
+0.0052%
per 8h · its usual range +0.0040% to +0.0215%

OPEN INTEREST
$58.14M
−13.5% over 7 days · Coinalyze

LONG/SHORT ACCOUNTS
0.74
42% long · Coinalyze

Hyperliquid funding is +0.0081%/8h now and +0.0052%/8h on a 7-day average. Open interest across exchanges is $58M, down 13.5% over seven days, and the long/short account ratio is 0.74 (42% long). **Decision: NO TRADE** — the evidence does not favour either end of the range.

Conclusion

Fees are still large and the burn still runs, but the 7-day pace has fallen below the 30-day while insider tokens arrive into a weak price. Funding sits inside its usual range, so positioning is not a driver. The balance tilts to the lower half of the range, not far enough for a directional view.

NO TRADE **The evidence does not favour either end of the range**

RE-ASSESS ON A DAILY CLOSE ABOVE
$0.005126
the 30-day high

RE-ASSESS ON A DAILY CLOSE BELOW
$0.003503
the 30-day low

Not entry triggers: the bot's own record shows trading the break loses; a close beyond either level re-opens the view.

What changes the view: 7-day annualised fees back above the 30-day pace for two weeks

Range: 8-week 1σ $0.002391–$0.005544 at 5.6% a day.

Alerts to set

$0.005126	a daily close above the 30-day high — re-assess, not an entry
$0.003503	a daily close below the 30-day low — re-assess, not an entry

Liquidity

24h spot volume $107.53M (CoinGecko) · Hyperliquid perp, max 10×; order book within ±1%: $3.79M bids / $2.39M asks · Lighter perp listed.

Risk class: GROWTH

Between the CORE and SPECULATIVE tests (FDV < $20B, fees ≥ $100M a year, volume < $500M). A label for how established the asset is, not a position size: size any trade from your own risk budget (account × risk % ÷ stop distance).

DATA GAPS

Forward on-chain supply is not measured, so actual releases may differ from DefiLlama's schedule. No dated primary source explains the fee slowdown or quantifies points farming. The buyback's end date is unconfirmed, so its offset to insider supply could stop.

METHOD

Every number is read by the bot from the named source at the time shown; the AI (deepseek/deepseek-v4.1-flash, deep dive, 25 web results, plus a search on the bot's news leads) writes the words and may only use those numbers — a gate checks every figure in the text before publication. The verdict is the research's stated lean, kept as a direction only when its conviction is medium or high and an independent second read of the same research agrees; a tilt, or a disagreement, is published as NEUTRAL. The range is the coin's 30-day realised volatility projected 8 weeks. Trade levels follow fixed rules: the entry zone sits at the edge of the 30-day range — or the 7-day range when the 30-day edge is more than two weekly moves away — (no chasing), the stop one weekly 1σ beyond it, targets at 2R and the next band edge; TRADE NOW only when price is in the zone, otherwise WAIT. The idea is scored publicly 7 and 30 calendar days after publication; a WAIT that never reaches its zone is scored "not filled".
