LAYER 1 · TOKEN RESEARCH

Ethereum ETH

Ethereum's fee base is flat, the recent spike is one-off exploiter flow, supply is inflationary and ETH trades at 1,215× annualised fees against a 217× peer median. Crowded longs and a close at the 30-day low leave the 8-week risk to the downside.

PRICE	FULLY DILUTED VALUE	FDV ÷ ANNUAL FEES	NEW SUPPLY, 90D (DOCUMENTED)
$2240.32	$273.77B	1215×	+0.0%
−17% 30d	mcap $273.77B	÷ revenue 3097× ($88.41M/yr)	0M of 122M float

KEY POINTS

1. **Fee run-rate flat, spike one-off.** 30d fees were $18.52M, or $225.29M annualised. The 7d annualised $419.40M coincides with the exploiter dumping into 70,480 ETH, one-off flow rather than demand.
   DefiLlama fees; lookonchain.com, 30 Oct 2026
2. **Rich against the full peer set.** ETH trades at 1,215.2× annualised fees and 3,096.7× annualised revenue. The peer median is 217.0× fees and 607.8× revenue; Tron is 109.8× on both.
   DefiLlama and CoinGecko peers, 30 Oct 2026
3. **Supply is inflationary.** ethwatch reads issuance of 3,008 ETH/day against a burn of 10 ETH/day, so net +2,998 ETH/day, or +0.9%/yr, with burn near zero.
   ethwatch, 25 Oct 2026
4. **Crowded longs, shrinking open interest.** The long/short account ratio is 3.30, with 77% of accounts long, while open interest across exchanges fell 4.8% to $5,263M over seven days.
   Coinalyze, 30 Oct 2026
5. **Monetary premium and collateral demand.** Stablecoin and tokenised-asset balances raise ETH collateral and staking demand, and the revenue multiple ignores a monetary premium ZK-Labs itself calls undeterminable.
   ZK-Labs, 3 Oct 2026

WHAT IT IS

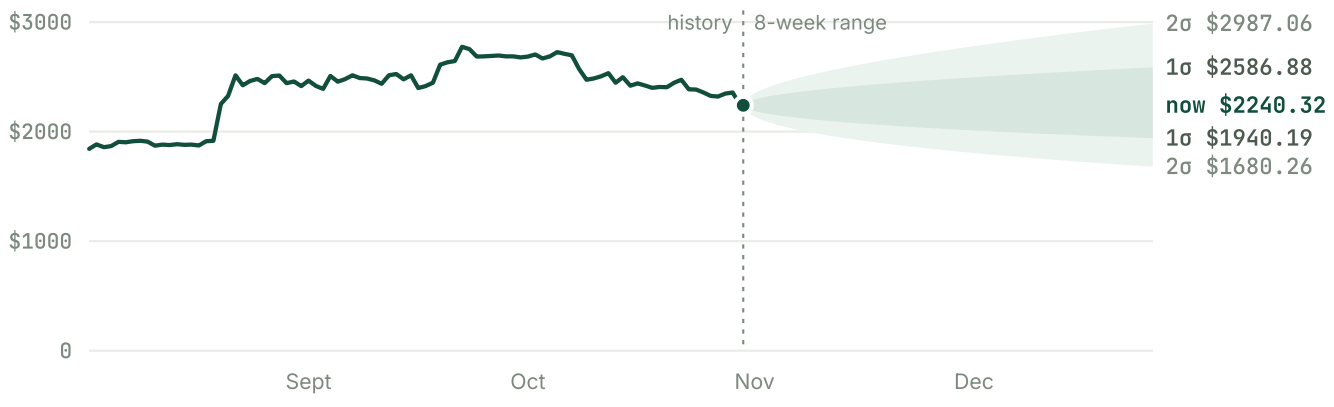

Ethereum is a shared computer: thousands of independent nodes run the same smart-contract code, so programs can hold money and enforce rules without a company. ETH pays gas, is posted as a validator deposit under proof of stake, and is used as money and collateral, serving stablecoin rails, DeFi lenders, tokenised-asset issuers and rollups that settle to mainnet.

THE BOT'S RANGE

At ETH's 30-day volatility (1.9% a day), the volatility-derived 8-week range is $1940.19–$2586.88 (1σ) and $1680.26–$2987.06 (2σ) — if recent volatility holds. It is a scenario frame, not a forecast or a calibrated probability; the verdict says which end the evidence favours.

Price, 90 days, and the 8-week range

CoinGecko daily closes · shaded: 1σ and 2σ if 30-day volatility holds

Supply: Fully unlocked, no cliffs, mildly inflationary

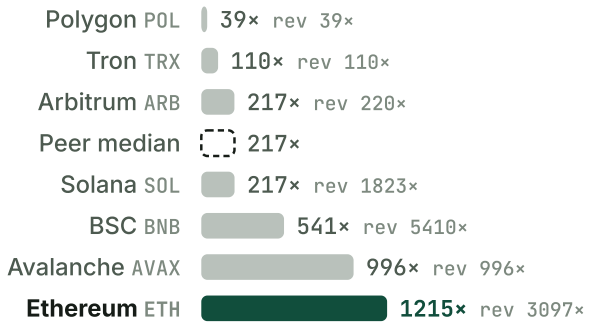

DefiLlama shows 128.0M of 128.0M unlocked, no cliffs and no new tokens in the next 90 days. ethwatch (25 Oct 2026) reads total supply 122,161,213 ETH, issuance 3,008 ETH/day, burn 10 ETH/day and net +2,998 ETH/day, or +0.9%/yr. Staking inflation is not captured in the unlock schedule.

Valuation: Fees are what matter; rich

For a chain, what matters is the base fee users pay and burn; ETH keeps little as protocol revenue. ETH trades at 1,215.2× annualised fees and 3,096.7× annualised revenue. The peer median is 217.0× fees and 607.8× revenue, so the premium is in the multiples, not the flows.

FDV ÷ annualised fees (revenue beside)

DefiLlama 30d × 365/30 · CoinGecko FDV · dashed: peer median

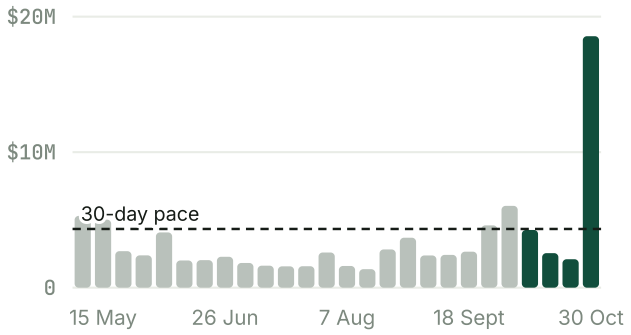

Usage: Flat L1 usage, one-off spike

30d fees were $18.52M, or $225.29M annualised, with 1y fees of $180.67M. The 7d annualised $419.40M coincides with the Binance exploiter moving 70,480 ETH, a one-off flow. Underlying L1 usage is flat, not accelerating.

Fees per week, 26 weeks

DefiLlama · last 4 weeks highlighted · dashed: 30-day pace

What would make this wrong

Fees re-accelerate organically.
A return to durable, non-exploiter fee growth would break the flat-usage call behind the verdict.

Exploiter overhang clears.
Disposal of the remaining 70,480 ETH without further selling removes the live supply overhang.

Glamsterdam date confirmed.
A formal December mainnet date would lift the upper half of the range toward $2,587 and the $2,726 30d high.

Deflation is the true state.
If the -0.010%/yr issuance reading holds, the inflationary-supply argument behind the verdict fails.

WATCHLIST — NOT CATALYSTS UNTIL CONFIRMED

CONFLICTING	Exchange reserves: 16M ETH (undated) versus 10.52M (ethwatch, 25 Oct 2026)	cryptorank.io; ethwatch
CONFLICTING	Issuance: -0.010%/yr deflation versus +0.9%/yr inflation, unreconciled	digitalassetdatabase.com 30 Oct 2026; ethwatch 25 Oct 2026
UNVERIFIED	Late-October ETF flows claimed at -$60M and -$89M	dossier search pass
UNDATED	Exploiter's remaining 70,480 ETH disposition; staking entry queue of 1,285,346 ETH activating	lookonchain.com 30 Oct 2026; ethwatch 25 Oct 2026

Positioning

FUNDING, 7-DAY AVG	OPEN INTEREST	LONG/SHORT ACCOUNTS
+0.0041%	$5.26B	3.30
per 8h · Hyperliquid	−4.8% over 7 days · Coinalyze	77% long · Coinalyze

Funding is +0.0100%/8h now, above the 7-day average of +0.0041%/8h, so longs pay shorts. The account long/short ratio is 3.30, with 77% long, while open interest fell 4.8% to $5,263M over seven days. Positioning is crowded long into falling momentum. **Decision: WAIT** — price is below the zone (wait for a bounce into it).

Conclusion

Ethereum's L1 fee base is flat, the annualised spike follows a one-off exploiter flow, supply is inflationary and the multiple sits above the peer median. Momentum is negative, with price closing at its 30-day low, and positioning is crowded long. The evidence sits in the lower half of the 8-week range.

WAIT · SHORT **The view is bearish, the entry is not here yet: price is below the zone (wait for a bounce into it)**

ZONE TO WATCH	ALERT AT	FILL BY
$2324.88–2384.75	$2324.88	6 Nov
the top of the 7-day range	price reaching the zone	else scored "not filled"

No chasing: the bot's rules enter at the edge of a recent range (the 30-day range, or the 7-day one when the 30-day edge is out of reach this week), never in the middle or on a break. Stop and targets follow fixed rules and print when price reaches the zone (a re-issue of this note).

What changes the view: Two weeks with 7d annualised fees above the 30d pace, excluding exploiter flow.

Range: 8-week 1σ $1940.19–$2586.88 at 1.9% a day.

Alerts to set

$2324.88	price reaches the top of the 7-day range — the zone (re-issue with levels)
6 Nov	fill deadline — no fill by then scores "not filled"
$2725.91	the 30-day high — a close beyond it is a break, not a fade: the view is re-assessed
December 2026	Foundation planning document targets Glamsterdam mainnet in this window; no formal date set.

Liquidity

DATA GAPS

No current ETF flow data for late October; the claimed -$60M and -$89M are unverified. Exchange reserves conflict, 16M versus 10.52M. Issuance readings conflict, -0.010%/yr versus +0.9%/yr. Several whale, Foundation-transfer and Aave leads could not be checked.

METHOD

Every number is read by the bot from the named source at the time shown; the AI (deepseek/deepseek-v4.1-flash, deep dive, 25 web results, plus a search on the bot's news leads) writes the words and may only use those numbers — a gate checks every figure in the text before publication. The range is the coin's 30-day realised volatility projected 8 weeks. Trade levels follow fixed rules: the entry zone sits at the edge of the 30-day range — or the 7-day range when the 30-day edge is more than two weekly moves away — (no chasing), the stop one weekly 1σ beyond it, targets at 2R and the next band edge; TRADE NOW only when price is in the zone, otherwise WAIT. The idea is scored publicly 7 and 30 calendar days after publication; a WAIT that never reaches its zone is scored "not filled".
