LAYER 1 · TOKEN RESEARCH

Ethereum ETH

Price sits at the bottom of its 30-day range after a 16.1% monthly fall. ETH trades at 3071.2x annualised revenue versus a 603.0x peer median, and Dencun has compressed L1 fees. The dossier's lean is neutral-to-bear, favouring the lower half.

PRICE	FULLY DILUTED VALUE	FDV ÷ ANNUAL FEES	NEW SUPPLY, 90D (DOCUMENTED)
$2222.58	$271.52B	1205×	+0.0%
−17% 30d	mcap $271.52B	÷ revenue 3071× ($88.41M/yr)	0M of 122M float

KEY POINTS

1. **Fees exceed revenue.** 30-day fees were $18.52M, annualised $225.29M; revenue was $7.27M, annualised $88.41M. Seven-day fees annualised $419.40M.
   DefiLlama fees, 30 Oct 2026
2. **Valuation premium to peers.** FDV/annualised revenue is 3071.2x versus a 603.0x peer median; FDV/annualised fees is 1205.2x versus 217.5x.
   BOT FACTS peers, 30 Oct 2026
3. **Dencun compressed L1 fees.** Dencun moved rollup data to blobs, L1 fees collapsed and supply grew about 0.18% in 2025.
   ethereumunpacked.com, Oct 2026
4. **Momentum weak after hack.** ETH is $2,222.58, down 16.1% in 30 days and 3.9% in 24 hours. CoinDesk tied the fall to a $6B Binance hack and $1.5B liquidations.
   CoinDesk, 30 Oct 2026
5. **Funding now favours shorts.** Funding is -0.0361%/8h now, so shorts pay longs, against the 7-day average of +0.0042%/8h. Long/short is 3.30, with 77% of accounts long.
   Coinalyze, 30 Oct 2026

WHAT IT IS

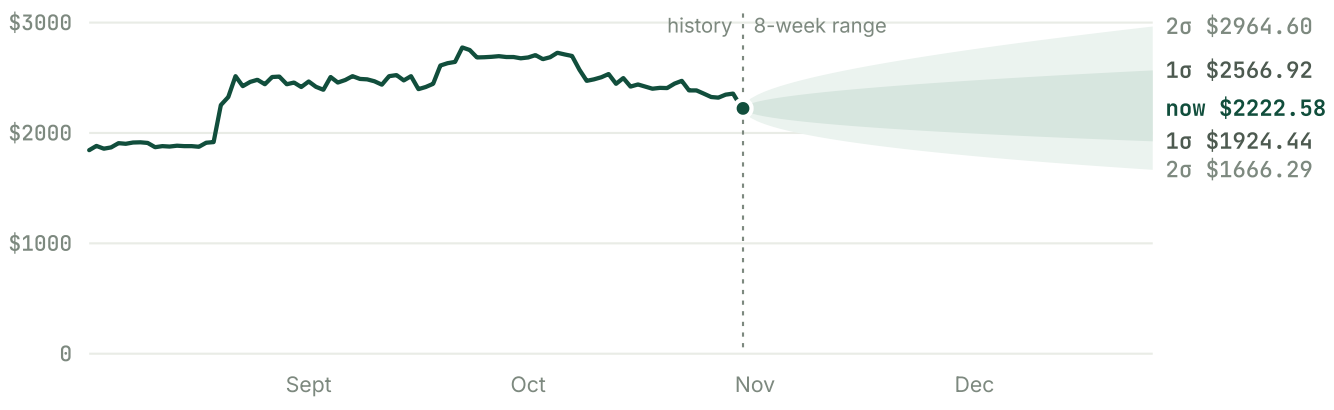

Ethereum is a proof-of-stake smart-contract network. ETH pays gas, secures the chain via staking, and is the collateral and unit of account for most on-chain finance. Users pay ETH for blockspace; validators earn issuance and fees; base fees are burned.

THE BOT'S RANGE

At ETH's 30-day volatility (1.9% a day), the volatility-derived 8-week range is $1924.44–$2566.92 (1σ) and $1666.29–$2964.60 (2σ) — if recent volatility holds. It is a scenario frame, not a forecast or a calibrated probability; the verdict says which end the evidence favours.

Price, 90 days, and the 8-week range

CoinGecko daily closes · shaded: 1σ and 2σ if 30-day volatility holds

Supply: No scheduled unlocks in next 90 days

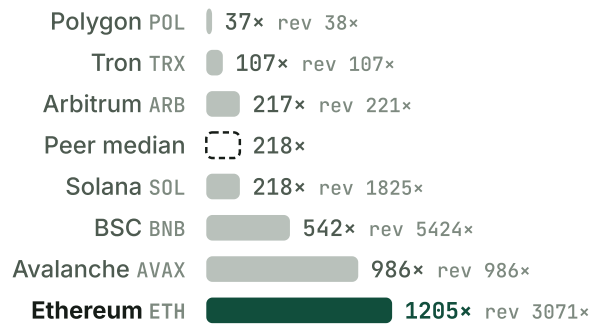

Circulating and total supply are 122.2M; FDV is $271.52B. DefiLlama shows 128.0M unlocked of 128.0M scheduled, no new tokens in the next 90 days and no cliffs. Ethwatch puts staked at 36.2%, ETFs 5.3%, free float 42.8%. Documented schedule excludes ongoing staking inflation.

Valuation: Revenue multiple far above peers

ETH's FDV/annualised revenue is 3071.2x versus a 603.0x peer median; FDV/annualised fees is 1205.2x versus 217.5x. Fees are what users pay; revenue is what the protocol keeps. For a monetary and settlement asset fees understate ETH, but the cash-flow multiple is not cheap.

FDV ÷ annualised fees (revenue beside)

DefiLlama 30d × 365/30 · CoinGecko FDV · dashed: peer median

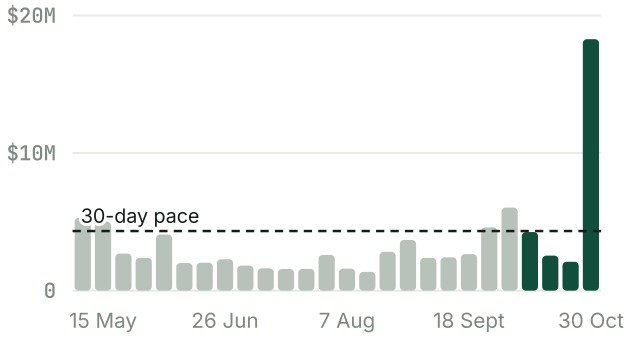

Usage: Fees high, revenue thin

30-day fees were $18.52M and revenue $7.27M; seven-day fees annualised $419.40M. Staking rewards are supply-side issuance, not user incentives.

Fees per week, 26 weeks

DefiLlama · last 4 weeks highlighted · dashed: 30-day pace

What would make this wrong

Fees reaccelerate.
Seven-day annualised fees are already $419.40M versus $225.29M for 30 days; if sustained, fee compression weakens.

Hack shock fades.
The Binance hack passes without further DeFi contagion, lifting ETH back above $2,400.

Funding stays negative.
Funding is -0.0361%/8h; sustained negative funding means shorts pay longs and can fuel a squeeze.

ETF flows reverse.
One-day $88.58M outflow on 26 Oct is not a trend; sustained inflows would improve demand.

Catalysts

December 2026	Glamsterdam targeted; no mainnet date formally set.	ethereumunpacked.com, Oct 2026

WATCHLIST — NOT CATALYSTS UNTIL CONFIRMED

UNVERIFIED	70,480 ETH exploiter buy volume	dossier lead

Positioning

FUNDING, 7-DAY AVG	OPEN INTEREST	LONG/SHORT ACCOUNTS
+0.0042%	$5.18B	3.30
per 8h · Hyperliquid	−6.3% over 7 days · Coinalyze	77% long · Coinalyze

Funding is -0.0361%/8h now versus a 7-day average of +0.0042%/8h; open interest is $5,181M, down 6.3% over 7 days. The long/short account ratio is 3.30, with 77% of accounts long. **Decision: WAIT** — price is below the zone (wait for a bounce into it).

Conclusion

The dossier's lean is neutral-to-bear, and the evidence favours the lower half: price is at the bottom of its 30-day range, valuation is far above the peer median, and Dencun has compressed L1 fees. Negative funding is the main counterpoint. A daily close below $2,223 opens $1,924; reclaiming $2,400 then $2,567 would shift the view.

WAIT · SHORT **The view is bearish, the entry is not here yet: price is below the zone (wait for a bounce into it)**

ZONE TO WATCH	ALERT AT	FILL BY
$2657.38–2725.91	$2657.38	6 Nov
the top of the 30-day range	price reaching the zone	else scored "not filled"

No chasing: the bot's rules enter at the edge of the 30-day range, never in the middle or on a break. Stop and targets follow fixed rules and print when price reaches the zone (a re-issue of this note).

What changes the view: Seven-day annualised fees hold above the 30-day annualised pace for two weeks

Range: 8-week 1σ $1924.44–$2566.92 at 1.9% a day.

Alerts to set

$2657.38	price reaches the top of the 30-day range — the zone (re-issue with levels)
6 Nov	fill deadline — no fill by then scores "not filled"
$2725.91	the 30-day high — a close beyond it is a break, not a fade: the view is re-assessed
December 2026	Glamsterdam targeted; no mainnet date formally set.

DATA GAPS

No 90-day annualised fees; no incentive/points share; no current Foundation/team/investor sale data; no full ETF flow series.

METHOD

Every number is read by the bot from the named source at the time shown; the AI (deepseek/deepseek-v4.1-flash, deep dive, 25 web results, plus a search on the bot's news leads) writes the words and may only use those numbers — a gate checks every figure in the text before publication. The range is the coin's 30-day realised volatility projected 8 weeks. Trade levels follow fixed rules: the entry zone sits at the edge of the 30-day range (no chasing), the stop one weekly 1σ beyond it, targets at 2R and the next band edge; TRADE NOW only when price is in the zone, otherwise WAIT. The idea is scored publicly 7 and 30 calendar days after publication; a WAIT that never reaches its zone is scored "not filled".
