LIQUID STAKING · TOKEN RESEARCH

ether.fi ETHFI

ETHFI trades at 26.4x annualised revenue versus an 11.1x peer median, with new Core Contributor supply starting 6 Nov. Price is weak and the buyback does not shrink float. Positioning is not crowded, which limits squeeze risk but does not fix valuation.

PRICE	FULLY DILUTED VALUE	FDV ÷ ANNUAL FEES	NEW SUPPLY, 90D (DOCUMENTED)
$0.60	$603.84M	n/a	none due
−22% 30d	mcap $603.84M	÷ revenue 26× ($22.89M/yr)	schedule fully unlocked · issuance not counted

KEY POINTS

1. **Revenue multiple above peers.** ETHFI trades at 26.4x annualised revenue; the peer median is 11.1x. Its fees multiple is not shown, so the revenue premium is the clearest valuation fact.
   DefiLlama/CoinGecko, 5 Nov 2026
2. **Fees run ahead of revenue.** 30-day fees annualise to $125.78M and 7-day fees to $154.49M. Revenue is $22.89M annualised, so most fees pass through rather than accrue to the protocol.
   DefiLlama fees, 5 Nov 2026
3. **Unlock adds modest supply.** 981.4M of 1.000B is unlocked. The next 90 days add 13.1M ETHFI, 1.3% of circulating supply, all Core Contributors, starting 6 Nov 2026.
   DefiLlama emissions, 5 Nov 2026
4. **Buyback is not a burn.** Through 18 Oct 2026, 1.83M ETHFI was paid out over six weeks; 1.28M, or 70%, left Cash accounts and only 548k was retained.
   Blockworks, 20 Oct 2026
5. **Card income is excluded.** DefiLlama's staking listings exclude Cash card income, so the 26.4x revenue multiple may overstate the expense of the business if the card is material.
   Coindaro, accessed 5 Nov 2026

WHAT IT IS

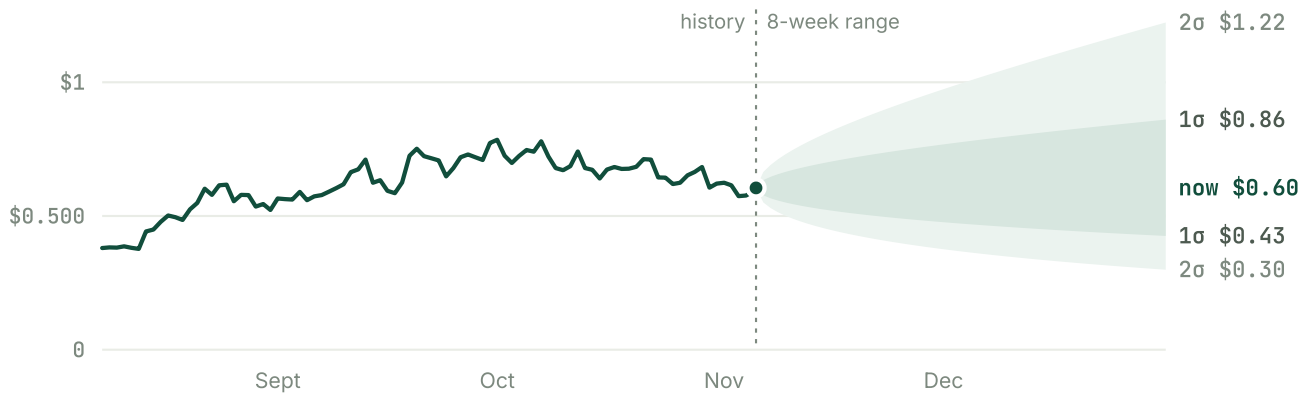

ETHFI is the governance token of ether.fi, a crypto app offering ETH staking through eETH/weETH, automated yield vaults, a Visa card called Cash and Markets trading. Users stake ETH, spend via the card and borrow against crypto; ETHFI is used for votes and app membership perks.

THE BOT'S RANGE

At ETHFI's 30-day volatility (4.7% a day), the volatility-derived 8-week range is $0.43–$0.86 (1σ) and $0.30–$1.22 (2σ) — if recent volatility holds. It is a scenario frame, not a forecast or a calibrated probability; the verdict says which end the evidence favours.

Price, 90 days, and the 8-week range

CoinGecko daily closes · shaded: 1σ and 2σ if 30-day volatility holds

Supply: Modest scheduled unlocks, disputed larger figure

DefiLlama shows 981.4M of 1.000B unlocked. The next 90 days add 13.1M ETHFI, 1.3% of CoinGecko circulating supply, all Core Contributors, starting 6 Nov 2026. Linear vesting is 1.0M/week to 14 Mar 2027, with no cliffs. CoinGecko circulating is 998.5M, so exact float is uncertain. A reported 44.8M remaining figure is disputed.

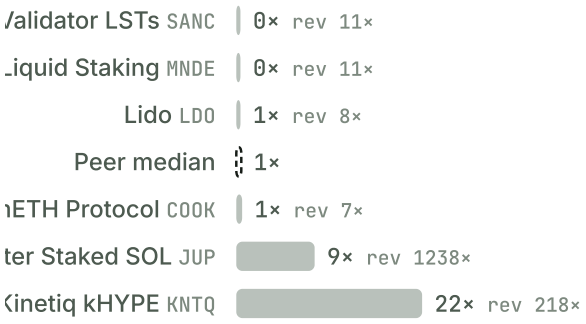

⚠ ETHFI's documented release schedule is fully unlocked — nothing more is scheduled. Ongoing issuance (staking or validator rewards, emissions) and any burn are outside it; the supply text above is the read on them.

Valuation: Revenue premium to peer median

Fees are what users pay; revenue is what ether.fi keeps. ETHFI's FDV is 26.4x annualised revenue versus an 11.1x peer median. Its FDV/annualised fees multiple is not shown. Revenue matters more than fees here because fees largely pass through; card income is excluded from the comparison.

FDV ÷ annualised fees (revenue beside)

DefiLlama 30d × 365/30 · CoinGecko FDV · dashed: peer median

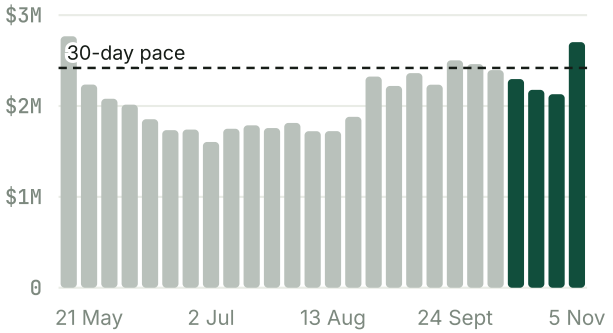

Usage: Fees high, revenue thin

30-day fees are $10.34M, annualising to $125.78M; 7-day fees annualise to $154.49M. Revenue is $1.88M over 30 days, or $22.89M annualised. DefiLlama excludes card income, so usage may be understated if Cash is material.

Fees per week, 26 weeks

What would make this wrong

Card revenue disclosed.
A dated disclosure showing material, profitable Cash card revenue would undercut the revenue-premium bear case.

Short crowding unwinds.
Long/short account ratio at 0.68 means few accounts are long; a shift could squeeze the bearish price trend.

Buyback accelerates.
Buyback contributions above $225k/week, if confirmed, would absorb more supply than the current schedule.

Unlock overhang smaller.
If the disputed 44.8M figure is wrong and only 13.1M unlocks in 90 days, supply pressure is limited.

Catalysts

6 Nov 2026–14 Mar 2027	Core Contributor vesting begins; 1.0M ETHFI per week through 14 Mar 2027.	DefiLlama emissions, 5 Nov 2026

WATCHLIST — NOT CATALYSTS UNTIL CONFIRMED

CONFLICTING	44.8M ETHFI remaining and 8.9M unlock on 15 Nov 2026	Coindaro, 5 Nov 2026
UNVERIFIED	Market-maker loans of about 11M ETHFI; renewal unconfirmed	Coindaro, 5 Nov 2026
UNDATED	Card revenue profitability and dated disclosure	Coindaro, 5 Nov 2026
UNDATED	Buyback contributions above $225k/week	Blockworks, 20 Oct 2026

Positioning

FUNDING, 7-DAY AVG	OPEN INTEREST	LONG/SHORT ACCOUNTS
+0.0100%	$20.41M	0.68
per 8h · Hyperliquid	−1.0% over 7 days · Coinalyze	40% long · Coinalyze

Funding is +0.0100%/8h now and on a 7-day average, so longs pay shorts. Open interest is $20M, down 1.0% over seven days. The long/short account ratio is 0.68, with 40% of accounts long: positioning is not crowded long. **Decision: TRADE NOW** — price is in the zone, funding inside its own range.

Conclusion

ETHFI is expensive on revenue versus its peer median, the buyback does not reduce float, and Core Contributor vesting starts on 6 Nov. The price trend is weak. The main offset is that DefiLlama excludes card income, which could make the revenue multiple look worse than the business is. Positioning is not crowded long.

SHORT · TRADE NOW **Trade idea · ETHFI perpetual · price is in the zone, funding inside its own range**

ENTRY ZONE	STOP	TARGET 1	TARGET 2
$0.59–0.62	$0.71	$0.40	$0.30
the top of the 7-day range — fade it	17% from mid · one weekly 1σ beyond the zone	2.0R · −34%	3.0R · 8-week 2σ low

Horizon: scored on 5 Dec 2026 (stop or T1 first).

Invalidated if: a daily close above $0.71, or: card revenue disclosed and buyback contributions exceed $225k/week for two consecutive weeks.

Levels: reference entry = the zone midpoint $0.61; R = |entry − stop| = $0.10; T1 = entry − 2R, T2 = 8-week 2σ low. Fees and slippage not included.

Size: position = (account × risk %) ÷ 16.8% stop distance. ETHFI moves ~4.7% a day.

Alerts to set

$0.71	stop — the idea is wrong; above here, step aside
$0.40	Target 1 (2R) — take profit or tighten the stop
$0.78	the 30-day high — a close beyond it is a break, not a fade: the view is re-assessed
6 Nov 2026–14 Mar 2027	Core Contributor vesting begins; 1.0M ETHFI per week through 14 Mar 2027.

Liquidity

DATA GAPS

No 90-day fees or revenue; no card revenue in DefiLlama; no primary team, foundation or investor sale data; no quantified emissions or points-farming split; buyback dashboard not primary; unlock schedule disputed; no confirmed governance, listing or equity earnings event in the next eight weeks.

METHOD

Every number is read by the bot from the named source at the time shown; the AI (deepseek/deepseek-v4.1-flash, deep dive, 25 web results, plus a search on the bot's news leads) writes the words and may only use those numbers — a gate checks every figure in the text before publication. The range is the coin's 30-day realised volatility projected 8 weeks. Trade levels follow fixed rules: the entry zone sits at the edge of the 30-day range — or the 7-day range when the 30-day edge is more than two weekly moves away — (no chasing), the stop one weekly 1σ beyond it, targets at 2R and the next band edge; TRADE NOW only when price is in the zone, otherwise WAIT. The idea is scored publicly 7 and 30 calendar days after publication; a WAIT that never reaches its zone is scored "not filled".
