LAYER 1 / PERP DEX · TOKEN RESEARCH

Hyperliquid HYPE

Fees annualise at $1.02B and revenue at $802M, and the 7-day fee pace exceeds the 30-day. But HYPE trades at 111x annualised revenue against a 31x peer median, with 410M future emissions and 238M contributor tokens outstanding.

PRICE	FULLY DILUTED VALUE	FDV ÷ ANNUAL FEES	NEW SUPPLY, 90D (DOCUMENTED)
$91.26	$86.75B	85×	+0.0%
+0% 30d	mcap $21.83B	÷ revenue 111× ($802.40M/yr)	floor · schedule covers only 41% of supply

KEY POINTS

1. **Fees above 30-day pace.** 30-day fees $83.81M, annualised $1.02B; 7-day fees $21.04M, annualised $1.10B, running above the 30-day rate. Revenue 30-day $65.95M, annualised $802.40M.
   DefiLlama fees
2. **Volume and open-interest share.** 24-hour perp volume was $15.93B on 30 Oct. A SEC filing puts Hyperliquid at about 9.4% of global perp volume and 63% of decentralised perp open interest in 2026.
   cipher-intelligence.io; sec.gov
3. **Premium to derivative peers.** FDV to annualised fees 85.1x and to annualised revenue 111.3x, against a peer median of 10.9x fees and 30.8x revenue.
   DefiLlama and CoinGecko peer set
4. **Known emission schedule, real buyback.** 390.6M unlocked of 390.7M scheduled; next 90 days add only 25,691 validator-reward tokens and no cliffs. The Assistance Fund bought about $1.7M of HYPE a day in the 7 days to 22 Oct.
   DefiLlama emissions; cipher-intelligence.io
5. **Overhang and team selling.** 410M future-emissions tokens and 238M contributor tokens remain outside circulating supply. The 7 Oct batch was 3,750,000 HYPE, about $342M, reported as an OTC sale to one institutional buyer.
   cipher-intelligence.io; crypto.news, 7 Oct 2026

WHAT IT IS

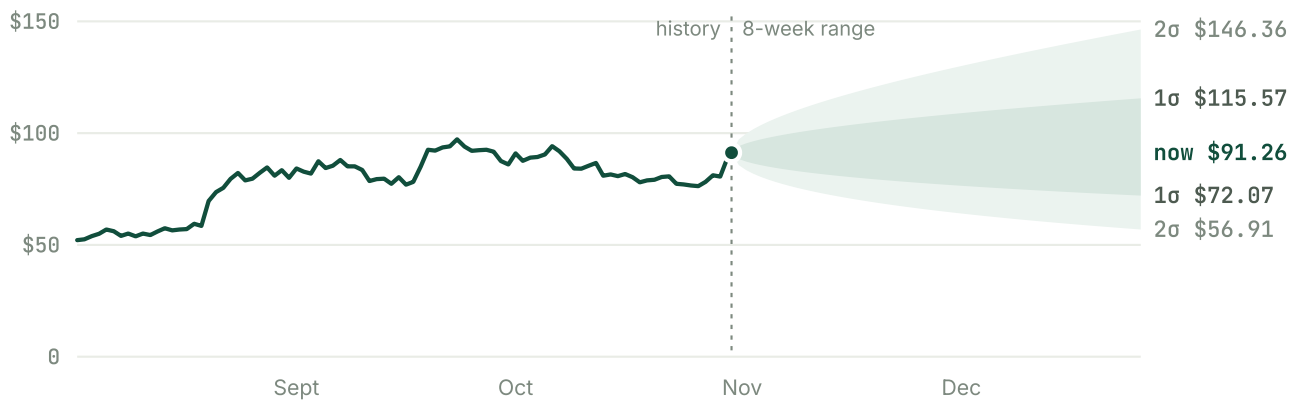

Hyperliquid is a Layer 1 blockchain whose main application is a fully on-chain order-book exchange for perpetual futures and spot. Users trade perps, stake HYPE to secure the network for fee discounts and pay gas on HyperEVM. The core users are professional market makers, prop traders and whales needing low latency and no gas on HyperCore.

THE BOT'S RANGE

At HYPE's 30-day volatility (3.2% a day), the volatility-derived 8-week range is $72.07–$115.57 (1σ) and $56.91–$146.36 (2σ) — if recent volatility holds. It is a scenario frame, not a forecast or a calibrated probability; the verdict says which end the evidence favours.

Price, 90 days, and the 8-week range

CoinGecko daily closes · shaded: 1σ and 2σ if 30-day volatility holds

Supply: Aggregators disagree on circulating supply

CoinGecko shows 239.4M circulating and 951.5M total. On-chain reads on 22 Oct show 998,836,744 total, 302,030,132 circulating, a 410,563,426 future-emissions reserve and 238,057,560 with the contributor address. DefiLlama's schedule has 390.6M of 390.7M unlocked, no cliffs, and only validator rewards ahead.

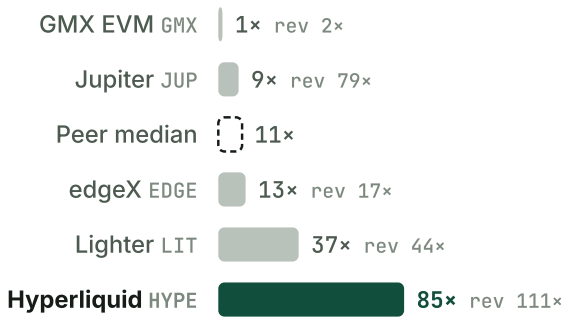

⚠ DefiLlama's documented schedule covers 391M of 952M total supply (41%). Allocations outside it — contributor, foundation or emission reserves — are not shown, so "no unlock" here means "none documented", not "none".

Valuation: 111x revenue against a 31x median

Revenue is the better anchor for HYPE: HIP-3 deployers may keep up to half the fees on their own markets, so gross fees overstate what the protocol keeps. FDV to annualised revenue is 111.3x against a 30.8x peer median; FDV to annualised fees is 85.1x against 10.9x.

FDV ÷ annualised fees (revenue beside)

DefiLlama 30d × 365/30 · CoinGecko FDV · dashed: peer median

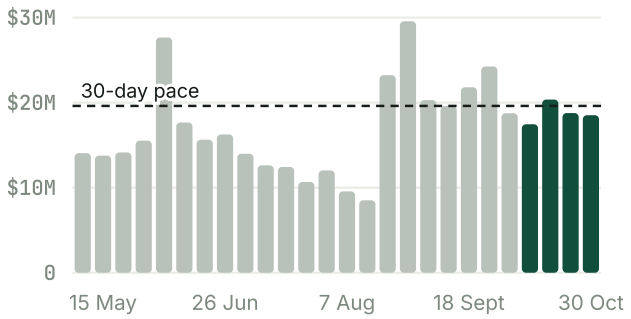

Usage: Fees above the 30-day pace

Fees were $83.81M over 30 days, annualised $1.02B, and $21.04M over 7 days, annualised $1.10B. Daily perp volume was $15.93B on 30 Oct. Staking rewards run about 2.37% a year at 400M HYPE staked, funded from the future-emissions reserve.

Fees per week, 26 weeks

DefiLlama · last 4 weeks highlighted · dashed: 30-day pace

What would make this wrong

Multiple is expensive.
111.3x annualised revenue against a 30.8x peer median leaves little room if growth slows.

Fees are volatile.
The buyback depends on fees; weakening fee pace would undercut the case. Cause of any slowdown not identified.

Supply overhang persists.
410M future-emissions and 238M contributor tokens, with monthly contributor transfers the pattern since Nov 2025.

Deal approvals may slip.
The ICE and trade[XYZ] onshore plan is subject to approvals, so the main bull trigger may not land on schedule.

Catalysts

31 Oct 2026	First validator-reward tokens under DefiLlama's emissions schedule	DefiLlama emissions schedule
6 Nov 2026	CoinGecko lists a next unlock of about 0.92M HYPE	CoinGecko

WATCHLIST — NOT CATALYSTS UNTIL CONFIRMED

UNDATED	ICE/trade[XYZ] onshore US perps awaiting CFTC approvals	ir.theice.com, 29 Oct 2026
MODELLED	Payward/Bitnomial CFTC-regulated HIP-3 perps	fxstreet.com, 27 Oct; coindesk.com, 16 Sep
UNVERIFIED	Three whale wallets sent 494,310 HYPE to Coinbase	unverified lead
UNVERIFIED	Abraxas Capital $1.29B short positions	unverified lead

Positioning

FUNDING, 7-DAY AVG	OPEN INTEREST	LONG/SHORT ACCOUNTS
+0.0136%	$428.55M	1.08
per 8h · Hyperliquid	+33.3% over 7 days · Coinalyze	52% long · Coinalyze

Funding is positive at +0.0100%/8h versus a 7-day average of +0.0136%/8h, so longs pay shorts. Open interest across exchanges is $429M, up 33.3% over 7 days. The long/short account ratio is 1.08, with 52% of accounts long. Crowding is mild but open interest is expanding. **Decision: NO TRADE** — the evidence does not favour either end of the range.

Conclusion

Fees run above the 30-day pace and the buyback is real, but HYPE trades at 111x annualised revenue against a 31x peer median with 410M future-emissions and 238M contributor tokens outstanding. At 3.2%/day realised volatility the 8-week range is $72 to $116. Evidence does not justify a directional view before the unlock or the approvals settle.

NO TRADE **The evidence does not favour either end of the range**

RE-ASSESS ON A DAILY CLOSE ABOVE	RE-ASSESS ON A DAILY CLOSE BELOW
$94.15	$76.25
the 30-day high	the 30-day low

Not entry triggers: the bot's own record shows trading the break loses; a close beyond either level re-opens the view.

What changes the view: Nov 6 unlock above 3.75M HYPE, or 7-day annualised fees below the 30-day pace for two weeks.

Range: 8-week 1σ $72.07–$115.57 at 3.2% a day.

Alerts to set

DATA GAPS

No primary next-90-day contributor unlock calendar was found, only press reports and CoinGecko estimates. Aggregator supply figures disagree. A Q3 share claim of 38.6% of on-chain perp volume conflicts with the SEC filing's 9.4% global perp volume and 63% decentralised open interest.

METHOD

Every number is read by the bot from the named source at the time shown; the AI (deepseek/deepseek-v4.1-flash, deep dive, 25 web results, plus a search on the bot's news leads) writes the words and may only use those numbers — a gate checks every figure in the text before publication. The range is the coin's 30-day realised volatility projected 8 weeks. Trade levels follow fixed rules: the entry zone sits at the edge of the 30-day range — or the 7-day range when the 30-day edge is more than two weekly moves away — (no chasing), the stop one weekly 1σ beyond it, targets at 2R and the next band edge; TRADE NOW only when price is in the zone, otherwise WAIT. The idea is scored publicly 7 and 30 calendar days after publication; a WAIT that never reaches its zone is scored "not filled".

LIMITATIONS

- the documented schedule covers only 41% of supply — printed as a floor
