PRIVACY LAYER 1 · TOKEN RESEARCH

Monero XMR

The balance of evidence tilts lower, but not strongly enough for a directional view: fee demand has not grown against a $10.49B valuation, and crowded longs sit on a falling seven-day trend. Fixed supply caps the downside.

NEUTRAL
over the next 8 weeks

PRICE	FULLY DILUTED VALUE	FDV ÷ ANNUAL FEES	NEW SUPPLY, 90D (DOCUMENTED)
$557.38	$10.49B	6821×	n/a
+3% 30d	mcap $10.49B	fees $1.54M a year, 30-day pace	no documented release schedule

KEY POINTS

1. **Fees price in almost nothing.** Fee demand runs at $1.54M annualised against a $10.49B FDV — 6821.4× fees, versus a 240.2× peer median.
   DefiLlama fees; CoinGecko, 12 Nov 2026
2. **No claim on income.** Revenue is $0 lifetime: all fees are wages for miners, and there is no treasury, burn or buyback.
   DefiLlama revenue; Monero docs
3. **Issuance dwarfs fee demand.** Miner issuance is near $88M a year against roughly $1.5M of fee demand, about 50:1; miners are the only structural sellers.
   getmonero.org FAQ; nodely.dev
4. **Longs are crowded.** 7-day funding of +0.0831%/8h is above XMR's usual +0.0043%–+0.0619% range, while open interest fell 13.2% and price lost 12.6% in 7 days.
   Hyperliquid, Coinalyze, 12 Nov 2026
5. **Counterpoint: nothing unlocks.** All 18.83M XMR already circulates and supply grows about 0.21% a quarter, with no insiders holding coins to sell.
   Monero docs; nodely.dev

WHAT IT IS

Monero is a proof-of-work payments chain where every transaction hides sender, amount and receiver by default, using ring signatures, RingCT and stealth addresses. It mines with RandomX on ordinary CPUs, one block about every two minutes. Its users are people who need money to move without a public trail: remittance corridors, merchants settling through swap services, and privacy-first savers.

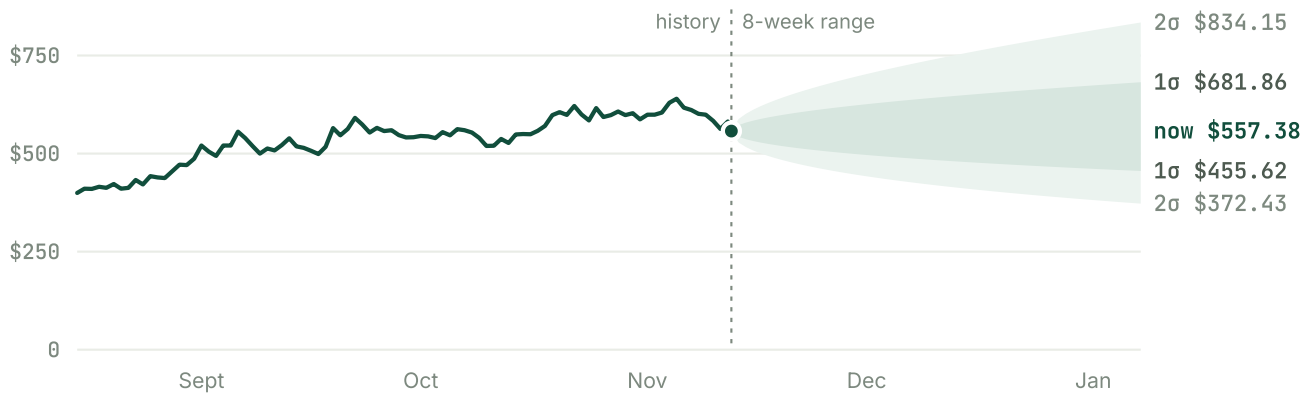

TRACK RECORD

ETHFI 5 Nov	BEARISH	+2.6% in 7 days	BTC −8.0%	wrong
NEAR 2 Nov	BEARISH	−15.5% in 7 days	BTC −4.5%	right
HYPE 30 Oct	NEUTRAL	−14.1% in 7 days	BTC −2.4%	held range
PEPE 30 Oct	BEARISH	−1.1% in 7 days	BTC −2.4%	right

Every earlier call with a 7-day score, newest first (5 so far — too few for a hit rate). Bitcoin's move over the same week is shown because a bearish call in a falling market proves little.

Price, 90 days, and the 8-week range

CoinGecko daily closes · shaded: 1σ and 2σ if 30-day volatility holds

Supply: No unlocks; miners get new coins

Nothing is scheduled to unlock over the next 90 days: all supply already circulates and new coins go only to miners as block rewards. Tail emission has been fixed at 0.6 XMR per two-minute block since June 2022, and daily issuance ran about 293–446 XMR over 4–11 Nov 2026.

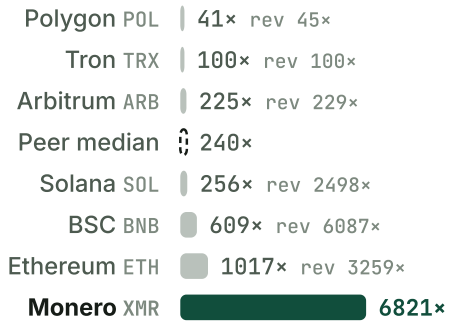

⚠ DefiLlama has no documented release schedule for XMR, so no 90-day supply figure is shown. Ongoing issuance (staking or mining rewards, emissions) and any burn are not counted here; the supply text above is the read on them.

Valuation: Fees are the only multiple

Fees are the right yardstick for a Layer 1 whose holders have no claim on protocol income; revenue is zero, so a revenue multiple cannot be drawn at all. Across the fee peer set the range runs from 41.0× (Polygon) to 1016.5× (Ethereum), and XMR sits above the top of it.

FDV ÷ annualised fees (revenue beside)

DefiLlama 30d × 365/30 · CoinGecko FDV · dashed: peer median

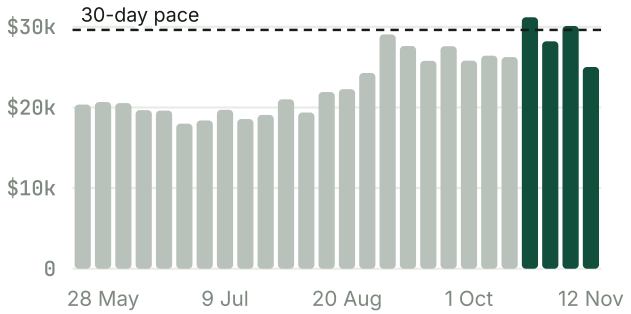

Usage: Organic, tiny and flat

Daily fee demand is roughly $3.8k; the 30-day total of $126,362 barely exceeds the 7-day pace of $29,715, so nothing is accelerating. There are no staking rewards, airdrops, points, treasury or buyback to manufacture activity — all of it is organic, and all of it is small.

Fees per week, 26 weeks

DefiLlama · last 4 weeks highlighted · dashed: 30-day pace

What would make this wrong

Monetary framing wins.
If buyers value XMR against bitcoin and gold rather than network fees, the cash-flow gap loses much of its force.

Only miners sell.
No unlocks, no insiders and slow issuance leave miners as the only sellers, so a demand shift can move price sharply.

Fee demand re-rates.
Seven-day annualised fees above the 30-day pace for two straight weeks would undercut the flat-demand case.

FCMP++ gets dated.
A dated FCMP++ mainnet announcement is the identified upside trigger and would lift the upgrade premium.

Positioning

FUNDING, 7-DAY AVG
+0.0831%
per 8h · its usual range +0.0043% to +0.0619% — longs crowded

OPEN INTEREST
$51.91M
−13.2% over 7 days · Coinalyze

LONG/SHORT ACCOUNTS
1.04
51% long · Coinalyze

Hyperliquid funding is +0.7023%/8h now against a 7-day average of +0.0831%/8h. Open interest across exchanges is $52M, down 13.2% over seven days, and the long/short account ratio is 1.04, with 51% of accounts long. **Decision: NO TRADE** — the evidence does not favour either end of the range.

Conclusion

Monero's evidence is split rather than conflicting: cash-flow tests make it the most expensive name in its peer set, fee demand has not grown, and the seven-day trend is down with longs crowded. Fixed supply, no unlocks and no insiders limit the sell side. The balance tilts lower, but not strongly enough for a directional view.

NO TRADE **The evidence does not favour either end of the range**

RE-ASSESS ON A DAILY CLOSE ABOVE
$640.02
the 30-day high

RE-ASSESS ON A DAILY CLOSE BELOW
$548.85
the 30-day low

Not entry triggers: the bot's own record shows trading the break loses; a close beyond either level re-opens the view.

What changes the view: 7-day annualised fees above the 30-day pace for two straight weeks.

Range: 8-week 1σ $455.62–$681.86 at 2.7% a day.

Alerts to set

DATA GAPS

No FCMP++ mainnet date exists outside the project's own research page. Zcash and Dash FDV and revenue are missing, so the privacy peer comparison is incomplete. KYC-free exchange volume totals are not available from DefiLlama or Nansen.

METHOD

Every number is read by the bot from the named source at the time shown; the AI (deepseek/deepseek-v4.1-flash, deep dive, 25 web results, plus a search on the bot's news leads) writes the words and may only use those numbers — a gate checks every figure in the text before publication. The verdict starts from the research's stated lean. 9 independent reads of the same research then answer, item by item, whether valuation, usage and supply each make a lower or a higher price more likely eight weeks out; the price trend is asked too but is not counted. The direction is kept only when at least two of those three items support it — 7 of the 9 reads agreeing on each — and none points the other way; a dated event that could go against it lowers that by one step. Anything else is published as NEUTRAL, with the tilt and the count stated. The range is the coin's 30-day realised volatility projected 8 weeks. Trade levels follow fixed rules: the entry zone sits at the edge of the 30-day range — or the 7-day range when the 30-day edge is more than two weekly moves away — (no chasing), the stop one weekly 1σ beyond it, targets at 2R and the next band edge; TRADE NOW only when price is in the zone, otherwise WAIT. The idea is scored publicly 7 and 30 calendar days after publication; a WAIT that never reaches its zone is scored "not filled".
