MEME TOKEN · TOKEN RESEARCH

# Pepe PEPE

No protocol revenue and no dated catalyst leave PEPE a pure sentiment trade. Price sits at its 30-day and 90-day high, longs are crowded and top wallets are concentrated, so the evidence favours the lower half of the eight-week range.

| PRICE | FULLY DILUTED VALUE | FDV ÷ ANNUAL FEES | NEW SUPPLY, 90D (DOCUMENTED) |
|---|---|---|---|
| $0.0000 | $2.13B | n/a | +0.0% |
| +19% 30d | mcap $2.13B | no revenue data | 0M of 420690.00B float |

## KEY POINTS

1. **No cash flow to holders.** There is no PEPE protocol fee, so no fee series exists to annualise and no revenue reaches holders. The project white paper identifies no project revenues.
   crypto-risk-metrics white paper, 30 Jun 2026
2. **Supply already circulating.** CoinGecko reads circulating, total and maximum supply all 420,690B. TokenRadar shows 97.01% released with no dated next unlock; none is scheduled in 90 days.
   CoinGecko / TokenRadar, 30 Oct 2026
3. **Ownership is concentrated.** Top 10 wallets hold 34.7% and top 50 hold 64.4% of supply. Binance's hot wallet alone holds 11.7%, with exchange omnibus wallets large.
   thedistributed.co, 30 Oct 2026
4. **Longs are crowded.** Funding is +0.0100%/8h and the seven-day average is +0.0101%/8h. Open interest is $111M, up 21.8% in seven days, and 72% of accounts are long.
   Coinalyze, 30 Oct 2026
5. **But the high is holding.** Spot is +19.3% over 30 days and at its 30-day and 90-day high. The 7.77T attacker dump has been absorbed and the Canary ETF filing is live optionality.
   CoinGecko / Lookonchain, 30 Oct 2026

## WHAT IT IS

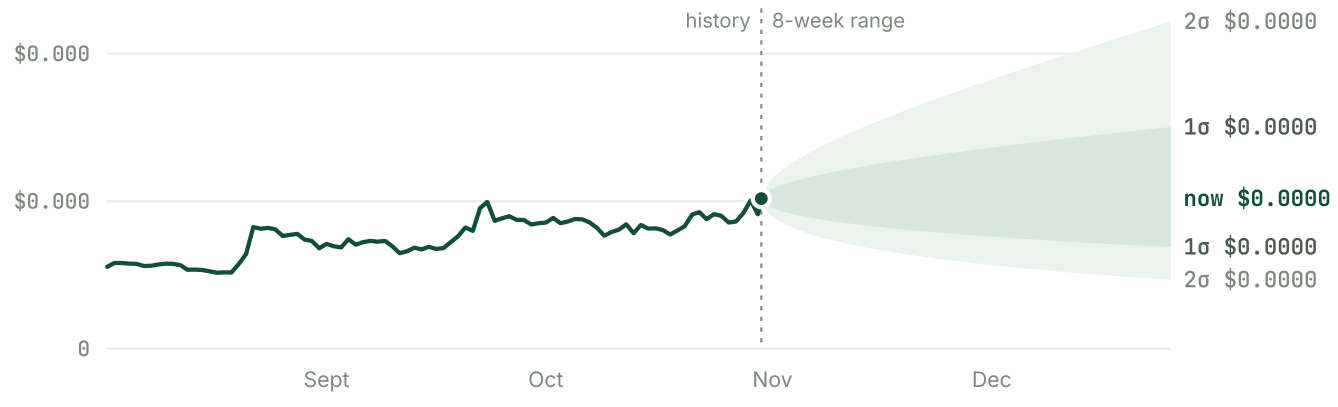

PEPE is an Ethereum ERC-20 meme token launched 14 April 2023 with a fixed supply, no tax, no staking and no governance. Holders send and trade it; liquidity providers earn DEX swap fees, and traders use it as high-beta meme exposure. It pays holders nothing.

## THE BOT'S RANGE

At PEPE's 30-day volatility (5.2% a day), the volatility-derived 8-week range is $0.0000–$0.0000 (1σ) and $0.0000–$0.0000 (2σ) — if recent volatility holds. It is a scenario frame, not a forecast or a calibrated probability; the verdict says which end the evidence favours.

**Price, 90 days, and the 8-week range**

CoinGecko daily closes · shaded: 1σ and 2σ if 30-day volatility holds

## Supply: Fully circulating, but highly concentrated

CoinGecko shows circulating, total and maximum supply all at 420,690B. TokenRadar has 97.01% released with no final release date, while Tokenomist says 100% unlocked; the gap is a modelled reserve. No unlock is scheduled in the next 90 days. Top 10 wallets hold 34.7%.

## Valuation: No cash flow, so no multiple

PEPE has no protocol fee and no identified revenue, so FDV ÷ annualised fees and FDV ÷ annualised revenue do not apply. CoinGecko puts FDV at $2.13B. Verified FDV and revenue for DOGE, SHIB and BONK were not available, so no peer median is quoted.

## Usage: Speculative trading, no fee utility

There is no PEPE protocol fee, staking reward, points programme or native emission. Activity is speculative spot and derivatives trading. DEX and liquidity-provider fees go to the pools, not to holders. No protocol revenue has been identified.

## What would make this wrong

**ETF approval.**
The SEC clears the Canary Capital S-1/A, adding the dated demand catalyst the no-catalyst case does not assume.

**Funding stays mild.**
Funding of +0.0100%/8h is positive but not extreme, so a leverage flush may not follow.

**Attacker supply absorbed.**
Spot held through the 7.77T dump; further absorption of known sellers would weaken the supply-overhang case.

**Concentration proves benign.**
Large exchange wallets and top holders are omnibus custody rather than sellers, so concentration does not translate into distribution.

## Catalysts

| | |
|---|---|
| – | No dated, sourced catalyst found for the next 8 weeks. |

WATCHLIST — NOT CATALYSTS UNTIL CONFIRMED

| | | |
|---|---|---|
| UNDATED | Canary Capital PEPE ETF S-1/A under SEC review, no fixed deadline | Lookonchain, 30 Oct 2026 |
| CONFLICTING | Unlock status: TokenRadar 97.01% released vs Tokenomist 100% | TokenRadar, 27 Sep 2026 / Tokenomist |
| UNVERIFIED | 2.27T PEPE moved from dormant wallets, no confirmed follow-through | Lookonchain, 28 Oct 2026 |
| UNVERIFIED | Justin Sun described as top whale; the $52M figure | icobench, 28 Oct 2026 |

## Positioning

| FUNDING, 7-DAY AVG | OPEN INTEREST | LONG/SHORT ACCOUNTS |
|---|---|---|
| **+0.0101%** | **$111.37M** | **2.56** |
| per 8h · Hyperliquid | +21.8% over 7 days · Coinalyze | 72% long · Coinalyze |

Funding is positive at +0.0100%/8h and has averaged +0.0101%/8h over seven days: longs pay shorts, but the rate is not extreme. Open interest of $111M is up 21.8% in a week and 72% of accounts are long. **Decision: WAIT** — price is above the 30-day high (a break, not a fade — re-assess).

## Conclusion

PEPE offers no cash flow and no dated catalyst. Spot sits at its 30-day and 90-day high while longs are crowded and top-10 wallets hold 34.7% of supply. The eight-week 1σ range is $0.00000345 to $0.00000751, and the evidence points to the lower half of it.

**WAIT · SHORT** **The view is bearish, the entry is not here yet: price is above the 30-day high (a break, not a fade — re-assess)**

| ZONE TO WATCH | ALERT AT | FILL BY |
|---|---|---|
| **$0.0000–0.0000** | **$0.0000** | **6 Nov** |
| the top of the 30-day range | price reaching the zone | else scored "not filled" |

**No chasing:** the bot's rules enter at the edge of a recent range (the 30-day range, or the 7-day one when the 30-day edge is out of reach this week), never in the middle or on a break. Stop and targets follow fixed rules and print when price reaches the zone (a re-issue of this note).

**What changes the view:** SEC approval of the Canary Capital PEPE ETF S-1/A

**Range:** 8-week 1σ $0.0000–$0.0000 at 5.2% a day.

## Alerts to set

| | |
|---|---|
| $0.0000 | price reaches the top of the 30-day range — the zone (re-issue with levels) |
| 6 Nov | fill deadline — no fill by then scores "not filled" |
| $0.0000 | the 30-day high — a close beyond it is a break, not a fade: the view is re-assessed |

## Liquidity

24h spot volume $1.90B (CoinGecko) · not listed on Hyperliquid.

## Risk class: SPECULATIVE

Fees under $10M a year. A label for how established the asset is, not a position size: size any trade from your own risk budget (account × risk % ÷ stop distance).

### DATA GAPS

No protocol fee or revenue series exists for 30, 90 or 12 months. Verified peer FDV and revenue for DOGE, SHIB and BONK were unavailable, so no peer median is quoted. Unlock trackers disagree, and nothing shows whether the 2.27T dormant move was sold.

### METHOD

Every number is read by the bot from the named source at the time shown; the AI (deepseek/deepseek-v4.1-flash, deep dive, 25 web results, plus a search on the bot's news leads) writes the words and may only use those numbers — a gate checks every figure in the text before publication. The range is the coin's 30-day realised volatility projected 8 weeks. Trade levels follow fixed rules: the entry zone sits at the edge of the 30-day range — or the 7-day range when the 30-day edge is more than two weekly moves away — (no chasing), the stop one weekly 1σ beyond it, targets at 2R and the next band edge; TRADE NOW only when price is in the zone, otherwise WAIT. The idea is scored publicly 7 and 30 calendar days after publication; a WAIT that never reaches its zone is scored "not filled".

### LIMITATIONS

- too little funding history to judge crowding against the coin's own range — the decision is price location only
- facts: DefiLlama: no fees series found
- facts: DefiLlama: no emissions schedule
