LAYER 1 · TOKEN RESEARCH

Avalanche AVAX

AVAX has real institutional headlines, but its near-term usage economics are weak. Real users are scarce, activity is bot-heavy, and network fees are negligible against FDV while Q3 net issuance was about 2.56M AVAX. Supply and unlock pressure persist.

KEY POINTS

1. **NYSE picks Avalanche.** NYSE selected Avalanche as core ledger for the clearing firm supporting its NYSE-affiliated tokenized-securities ATS.
   PR Newswire, 9 Nov 2026
2. **Bot-heavy activity.** Bitquery via AInvest: 95% of Q2 daily active addresses came from one wallet farm; bots sent 90-94% of activity by August; regulars fell to 21,506.
   AInvest/Bitquery
3. **Fees tiny versus FDV.** FDV is $4.01B. TTM network fees are about $2.85M; Q3 annualised network fees roughly $2.1M. App/protocol one-year fees are $120.54M but may not accrue to AVAX.
   AInvest/DefiLlama; Coinlaw
4. **Issuance outweighs burn.** Q3 staking rewards were about 2.62M AVAX; burned fees were 59,126 AVAX, leaving net issuance of about 2.56M AVAX.
   Blockworks Q3 2026
5. **Helicon burn and distribution.** Helicon activation doubled median burn to 1,791 AVAX/day from 959; NYSE and Schwab give distribution; supply is capped at 720M.
   AInvest; Blockworks; CoinGecko; Schwab

WHAT IT IS

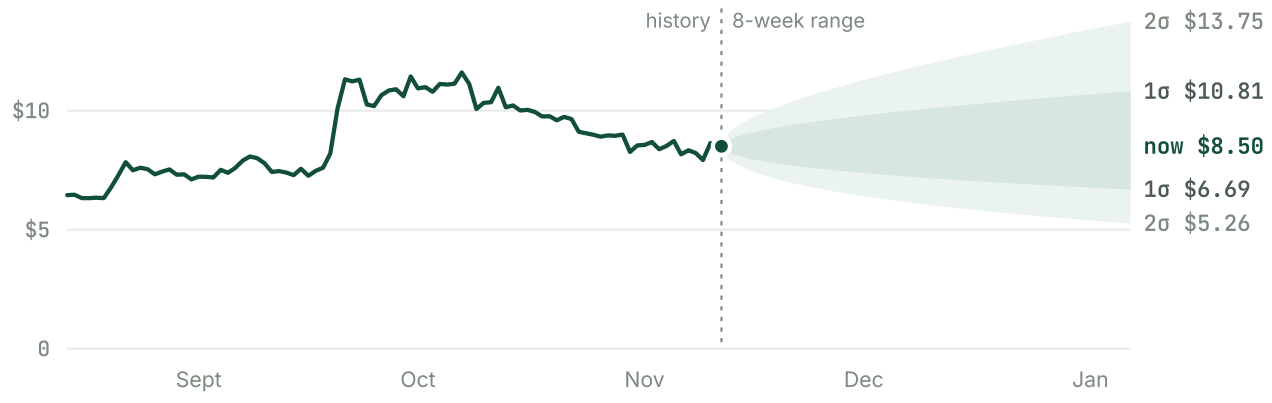

Avalanche is a proof-of-stake network. Its C-Chain runs EVM contracts, P-Chain coordinates validators, and X-Chain handles asset transfers. AVAX pays gas, secures the network via staking, and is the unit of account across Avalanche L1s; fees are burned. Institutions use it for tokenized assets.

THE BOT'S RANGE

At AVAX's 30-day volatility (3.2% a day), the volatility-derived 8-week range is $6.69–$10.81 (1σ) and $5.26–$13.75 (2σ) — if recent volatility holds. It is a scenario frame, not a forecast or a calibrated probability; the verdict says which end the evidence favours.

Price, 90 days, and the 8-week range

CoinGecko daily closes · shaded: 1σ and 2σ if 30-day volatility holds

Supply: Small scheduled unlocks, but issuance persists

CoinGecko 11 Nov 2026: circulating 445.8M, total 470.9M, max 720M. DefiLlama 11 Nov 2026: 445.3M unlocked of 471.9M scheduled; next 90 days +1.7M Foundation; first new tokens 2027-01-25; cliff 2027-01-24 1.7M. Staked AVAX was about 198M, 42% of total supply, across 594 validators at Q3 end.

Valuation: Network fees are what matter

FDV is $4.01B. TTM network fees are about $2.85M; Q3 annualised network fees roughly $2.1M. App/protocol one-year fees are $120.54M, but they may not accrue to AVAX. AVAX gas fees are burned, so network fees matter for supply. Peer median unavailable.

Usage: Bots dominate, regulars shrink

Q3 apps generated $27.2M fees and $7.25M revenue, first quarterly rise since Q3 2025; September fees were $10.4M. After Helicon, volume halved as bots left; humans did 74,629 tx/day at median fee $0.0041. Regulars fell to 21,506 in August.

What would make this wrong

NYSE ATS launches.
A dated NYSE tokenized ATS launch with measurable AVAX fee capture would undercut the bear case.

Institutional demand absorbs supply.
Schwab distribution and tokenized-asset demand offset Foundation unlocks and net issuance.

Burn keeps rising.
Median daily burn holds above 1,791 AVAX and network fees accelerate after Helicon.

Real users return.
Regular addresses recover from 21,506 and bot share falls, improving fee quality.

Catalysts

21 Dec 2026	Helicon reward-curve change phases in, lowering minimum consumption from 10% to 7.5%.	Blockworks Q3 2026
25 Jan 2027	Next scheduled Foundation unlock; 1.7M AVAX, 0.4% of CoinGecko circulating supply.	DefiLlama emissions

WATCHLIST — NOT CATALYSTS UNTIL CONFIRMED

UNDATED	NYSE tokenized ATS launch date	PR Newswire, 9 Nov 2026
CONFLICTING	Foundation 1.67M AVAX unlock already landed 8 Nov 2026	MrNasDog

Positioning

FUNDING, 7-DAY AVG	OPEN INTEREST	LONG/SHORT ACCOUNTS
-0.0015%	$76.13M	2.25
per 8h · Hyperliquid	+9.0% over 7 days · Coinalyze	69% long · Coinalyze

Funding is -0.0422%/8h now and -0.0015%/8h on a 7-day average, so shorts pay longs. Open interest is $76M, up 9.0% over 7 days. The long/short account ratio is 2.25, with 69% of accounts long. Positioning is mixed. **Decision: WAIT** — price is in the zone, but 7-day funding is at its own low extreme — crowded.

Conclusion

The NYSE and Schwab headlines are real, but AVAX's near-term economics are weak. Real users are scarce, activity is bot-heavy, and network fees are negligible against FDV. Q3 net issuance was about 2.56M AVAX, and the next scheduled Foundation unlock adds supply. Helicon's burn improvement and institutional distribution are the main risks to the bear view.

WAIT · SHORT **The view is bearish, the entry is not here yet: price is in the zone, but 7-day funding is at its own low extreme — crowded**

ZONE TO WATCH	ALERT AT	FILL BY
$8.37–8.73	in the zone	18 Nov
the top of the 7-day range	and funding back inside its range	else scored "not filled"

No chasing: the bot's rules enter at the edge of a recent range (the 30-day range, or the 7-day one when the 30-day edge is out of reach this week), never in the middle or on a break. Stop and targets follow fixed rules and print when price reaches the zone (a re-issue of this note).

What changes the view: 7-day annualised network fees hold above Q3 annualised $2.1M for two weeks.

Range: 8-week 1σ $6.69–$10.81 at 3.2% a day.

Alerts to set

$8.37	price reaches the top of the 7-day range — the zone (re-issue with levels)
18 Nov	fill deadline — no fill by then scores "not filled"
$10.23	the 30-day high — a close beyond it is a break, not a fade: the view is re-assessed
21 Dec 2026	Helicon reward-curve change phases in, lowering minimum consumption from 10% to 7.5%.
25 Jan 2027	Next scheduled Foundation unlock; 1.7M AVAX, 0.4% of CoinGecko circulating supply.

Liquidity

24h spot volume $308.03M (CoinGecko) · Hyperliquid perp, max 10×; order book within ±1%: $1.42M bids / $886k asks · Lighter perp listed.

Risk class: SPECULATIVE

Fees under $10M a year. A label for how established the asset is, not a position size: size any trade from your own risk budget (account × risk % ÷ stop distance).

DATA GAPS

Peer FDV and fee/revenue data were not available, so the valuation comparison is incomplete. Direct team, foundation or investor sale data was not found. NYSE ATS launch date, governance votes, Robinhood Chain Q3 DEX volume and Ondo Anthropic were not found.

METHOD

Every number is read by the bot from the named source at the time shown; the AI (deepseek/deepseek-v4.1-flash, deep dive, 25 web results, plus a search on the bot's news leads) writes the words and may only use those numbers — a gate checks every figure in the text before publication. The range is the coin's 30-day realised volatility projected 8 weeks. Trade levels follow fixed rules: the entry zone sits at the edge of the 30-day range — or the 7-day range when the 30-day edge is more than two weekly moves away — (no chasing), the stop one weekly 1σ beyond it, targets at 2R and the next band edge; TRADE NOW only when price is in the zone, otherwise WAIT. The idea is scored publicly 7 and 30 calendar days after publication; a WAIT that never reaches its zone is scored "not filled".

LIMITATIONS

- facts: DefiLlama: no fees series found
